FIRSTS

01

01

Firsts /
Situation &
Tasks

SITUATION

The company ran incentives programs using prepaid cards.

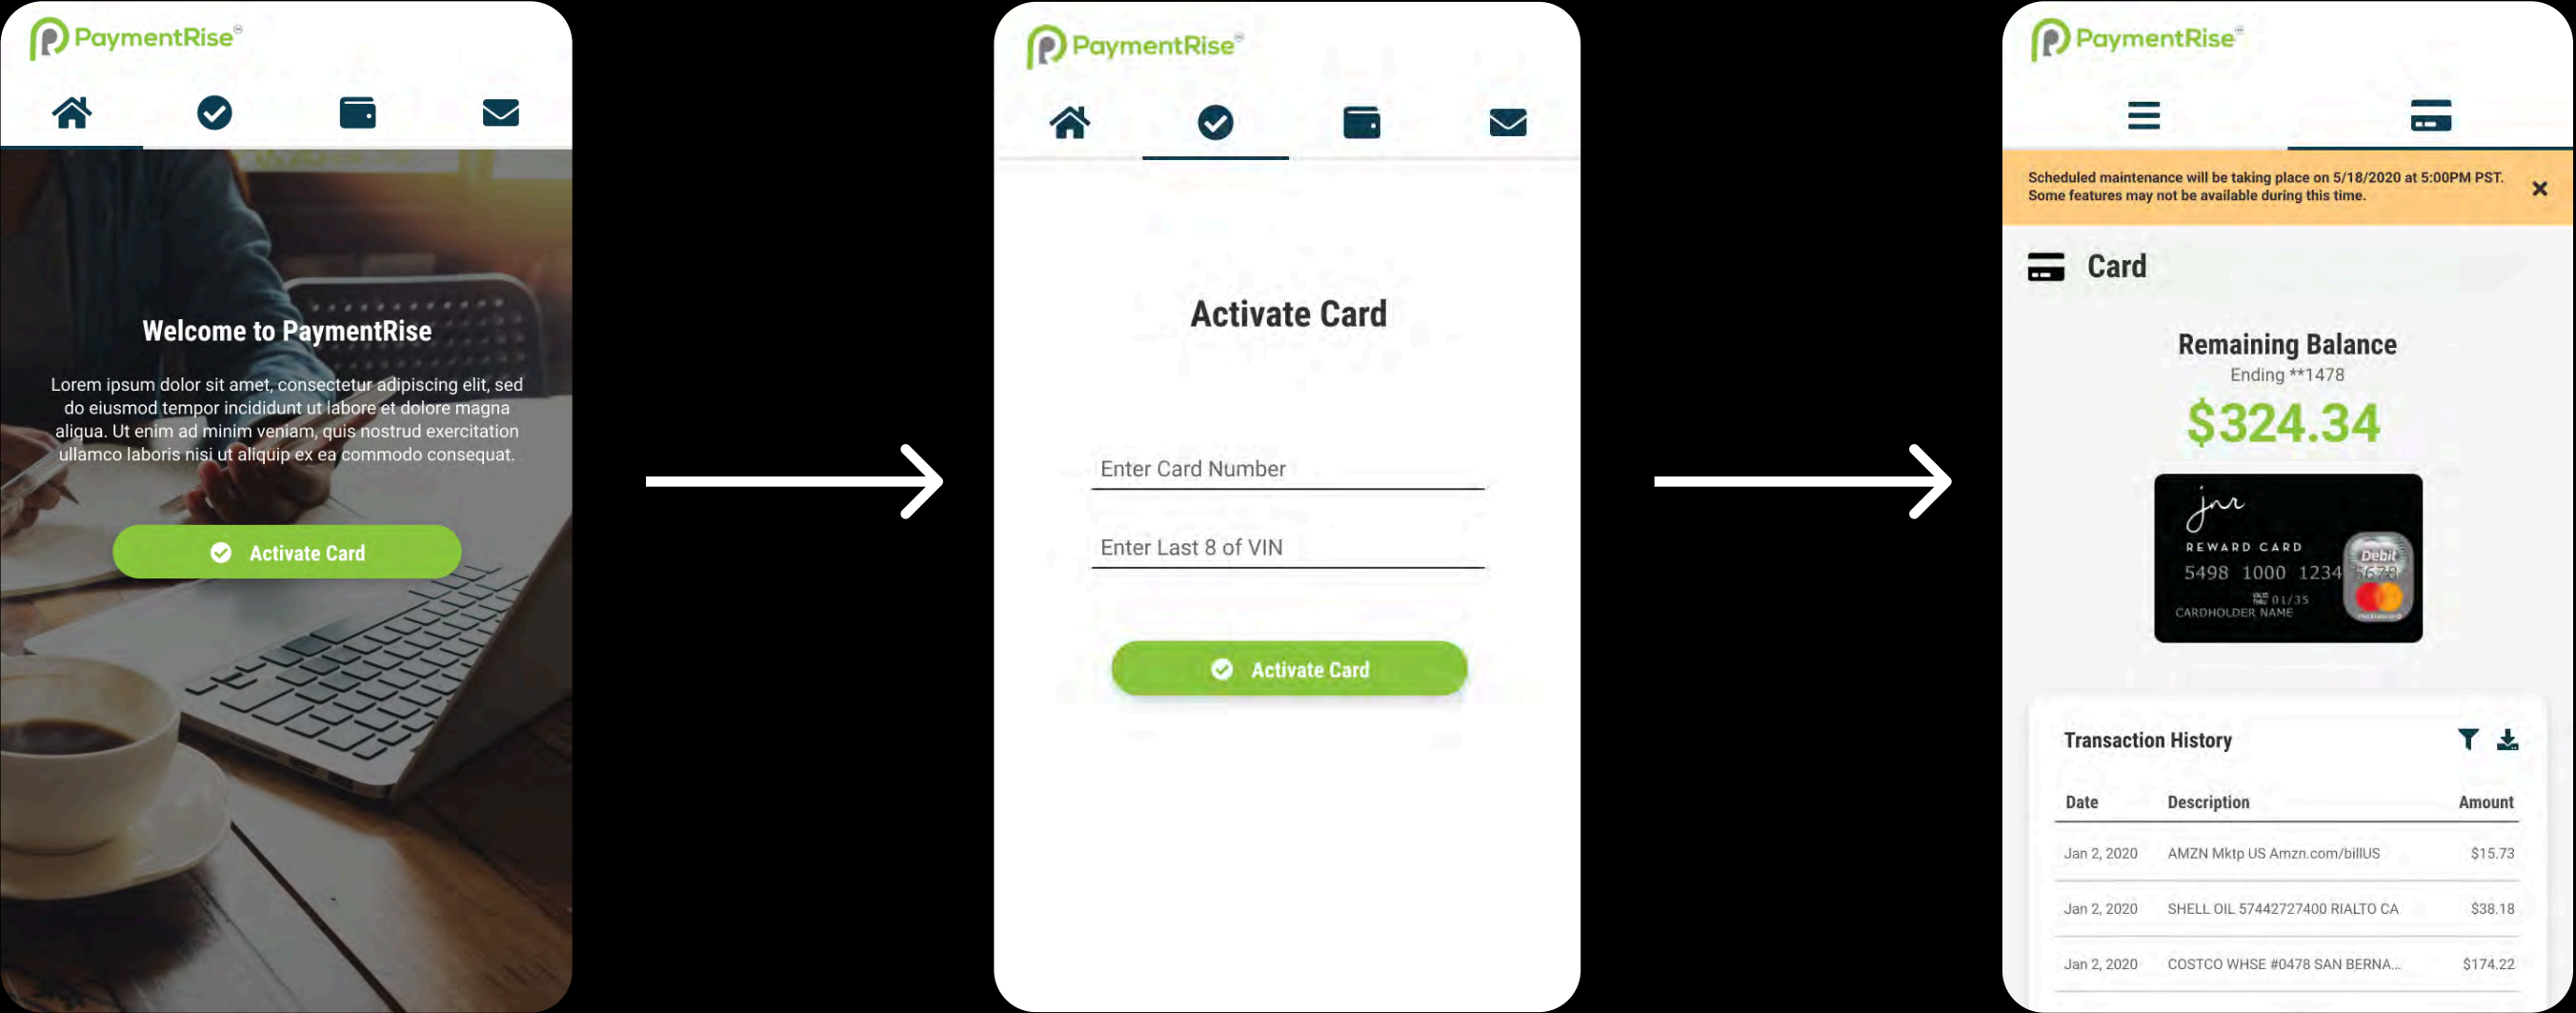

They utilized a third-party platform for the incentives programs.

The service was unreliable and had performance issues that led to many support calls.

TASK

- Create a configurable and scalable incentives platform.

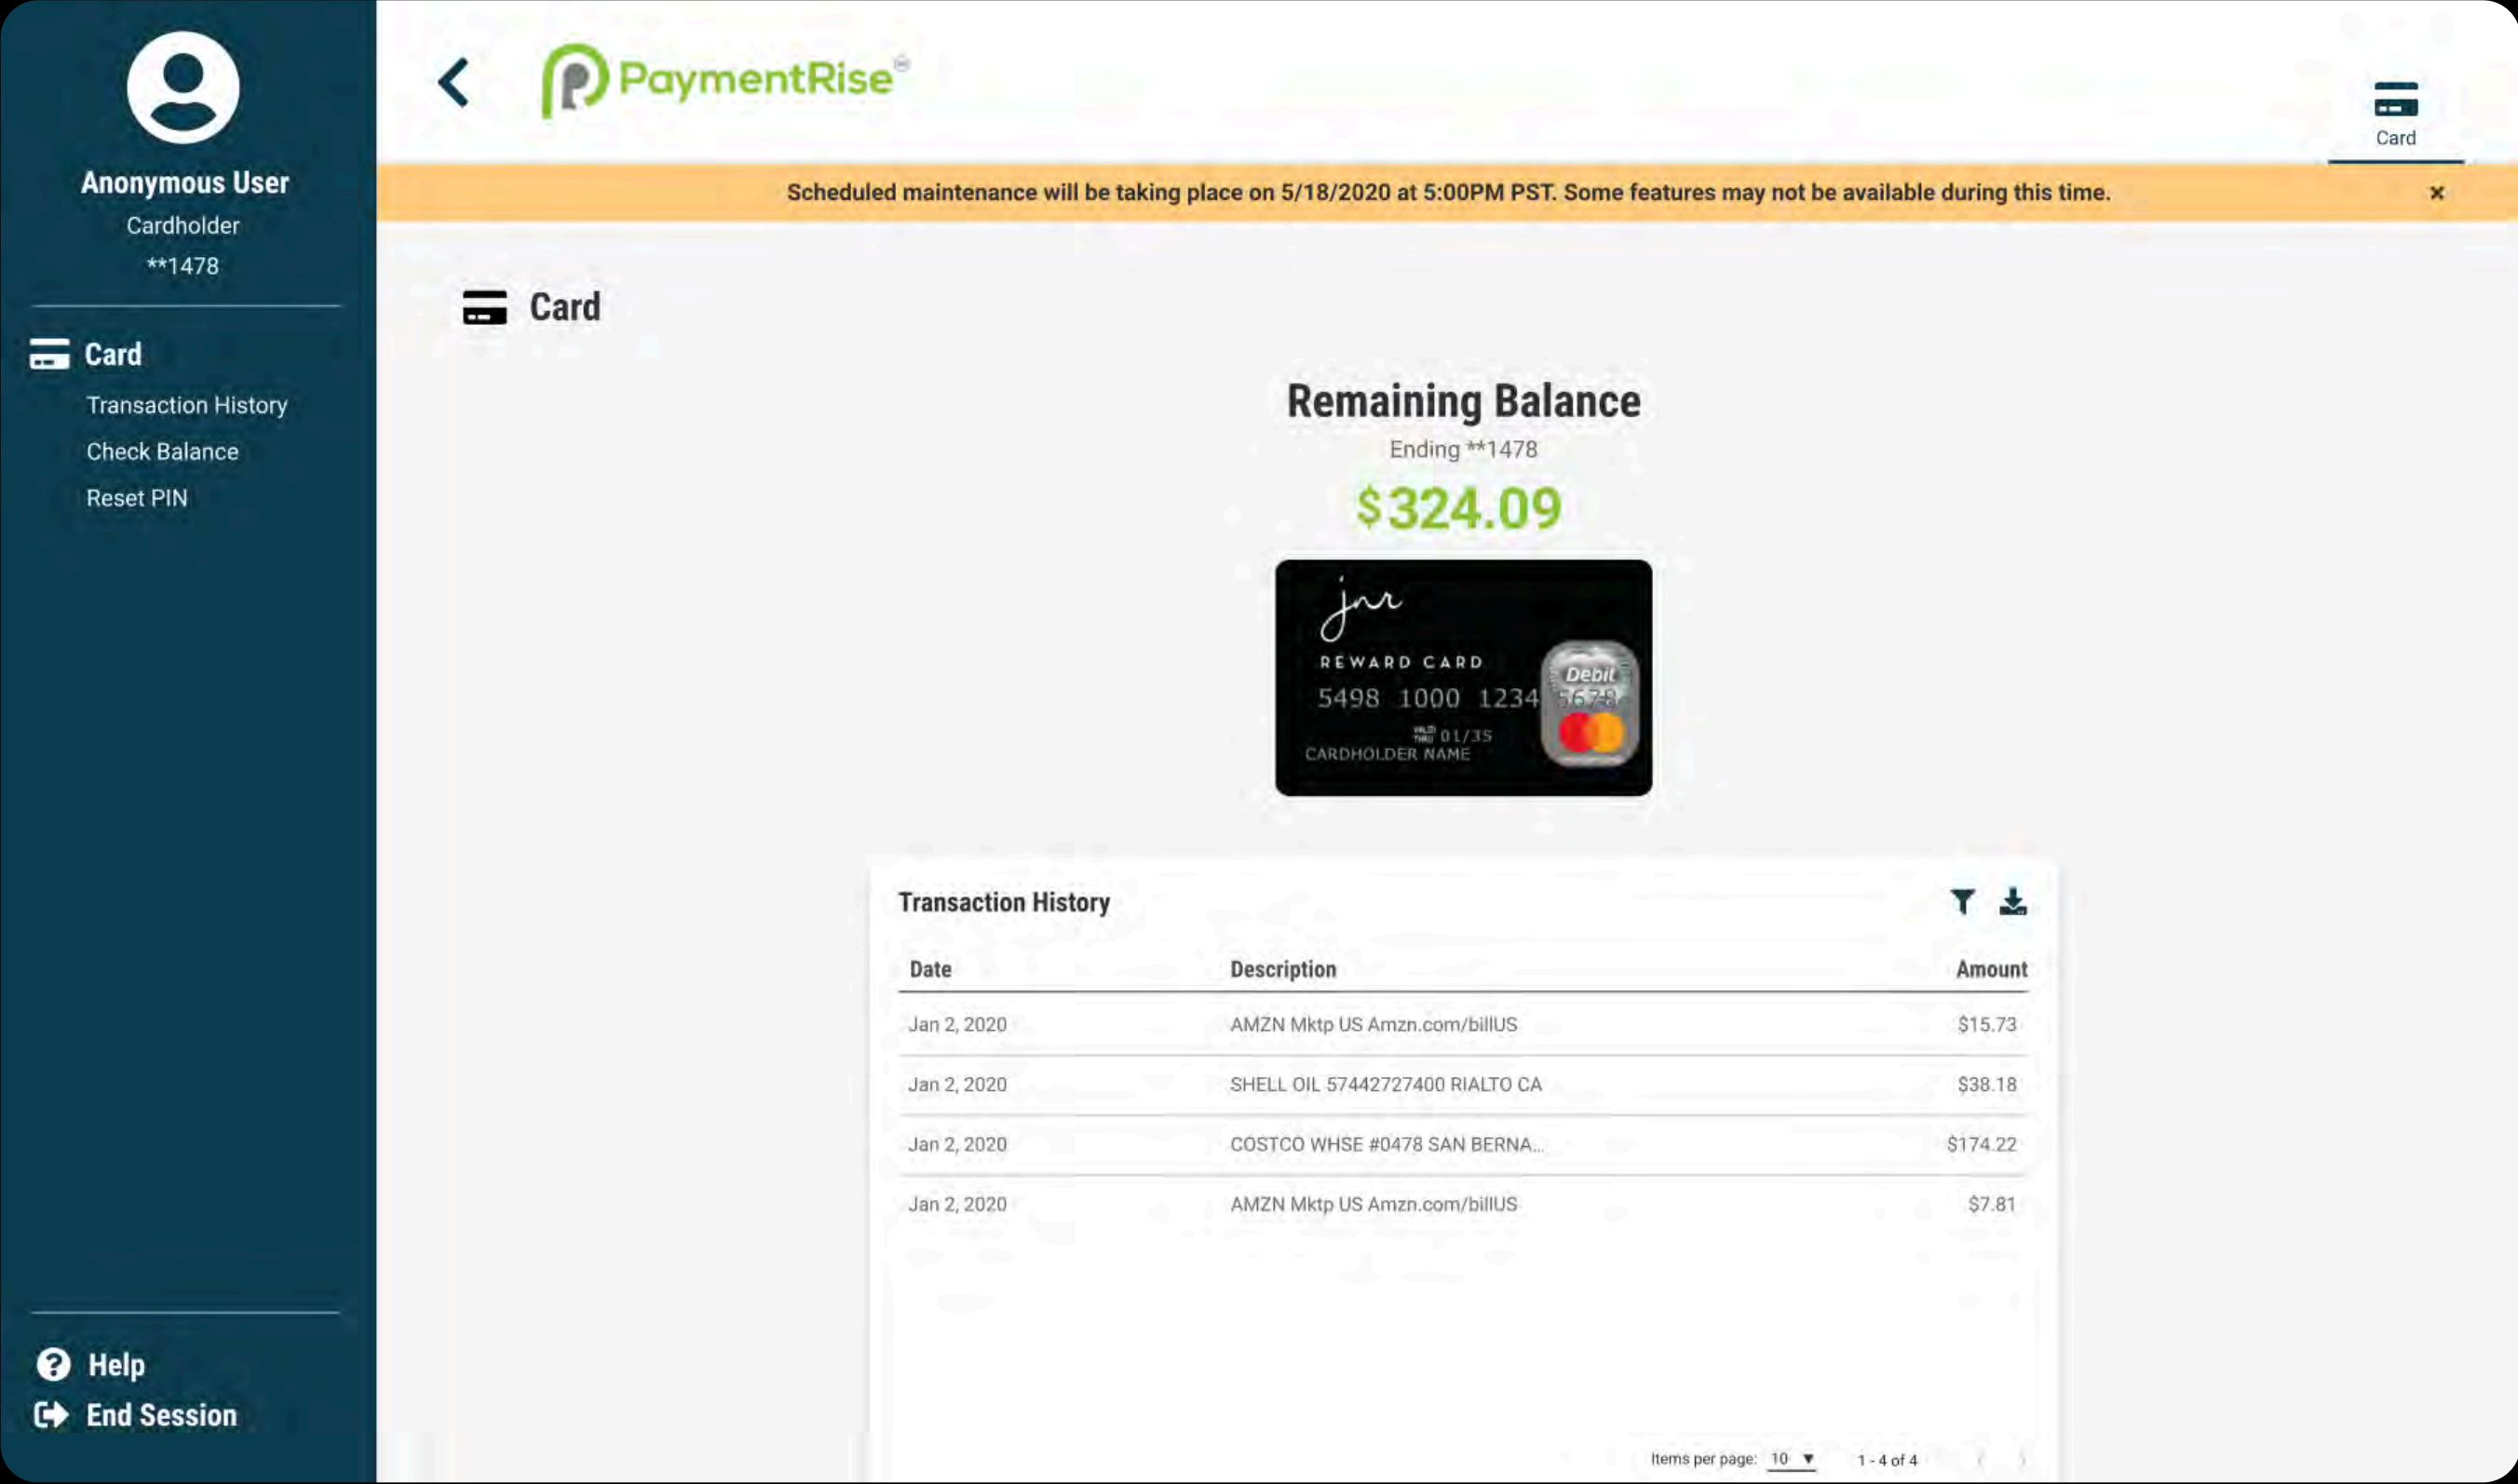

MVP

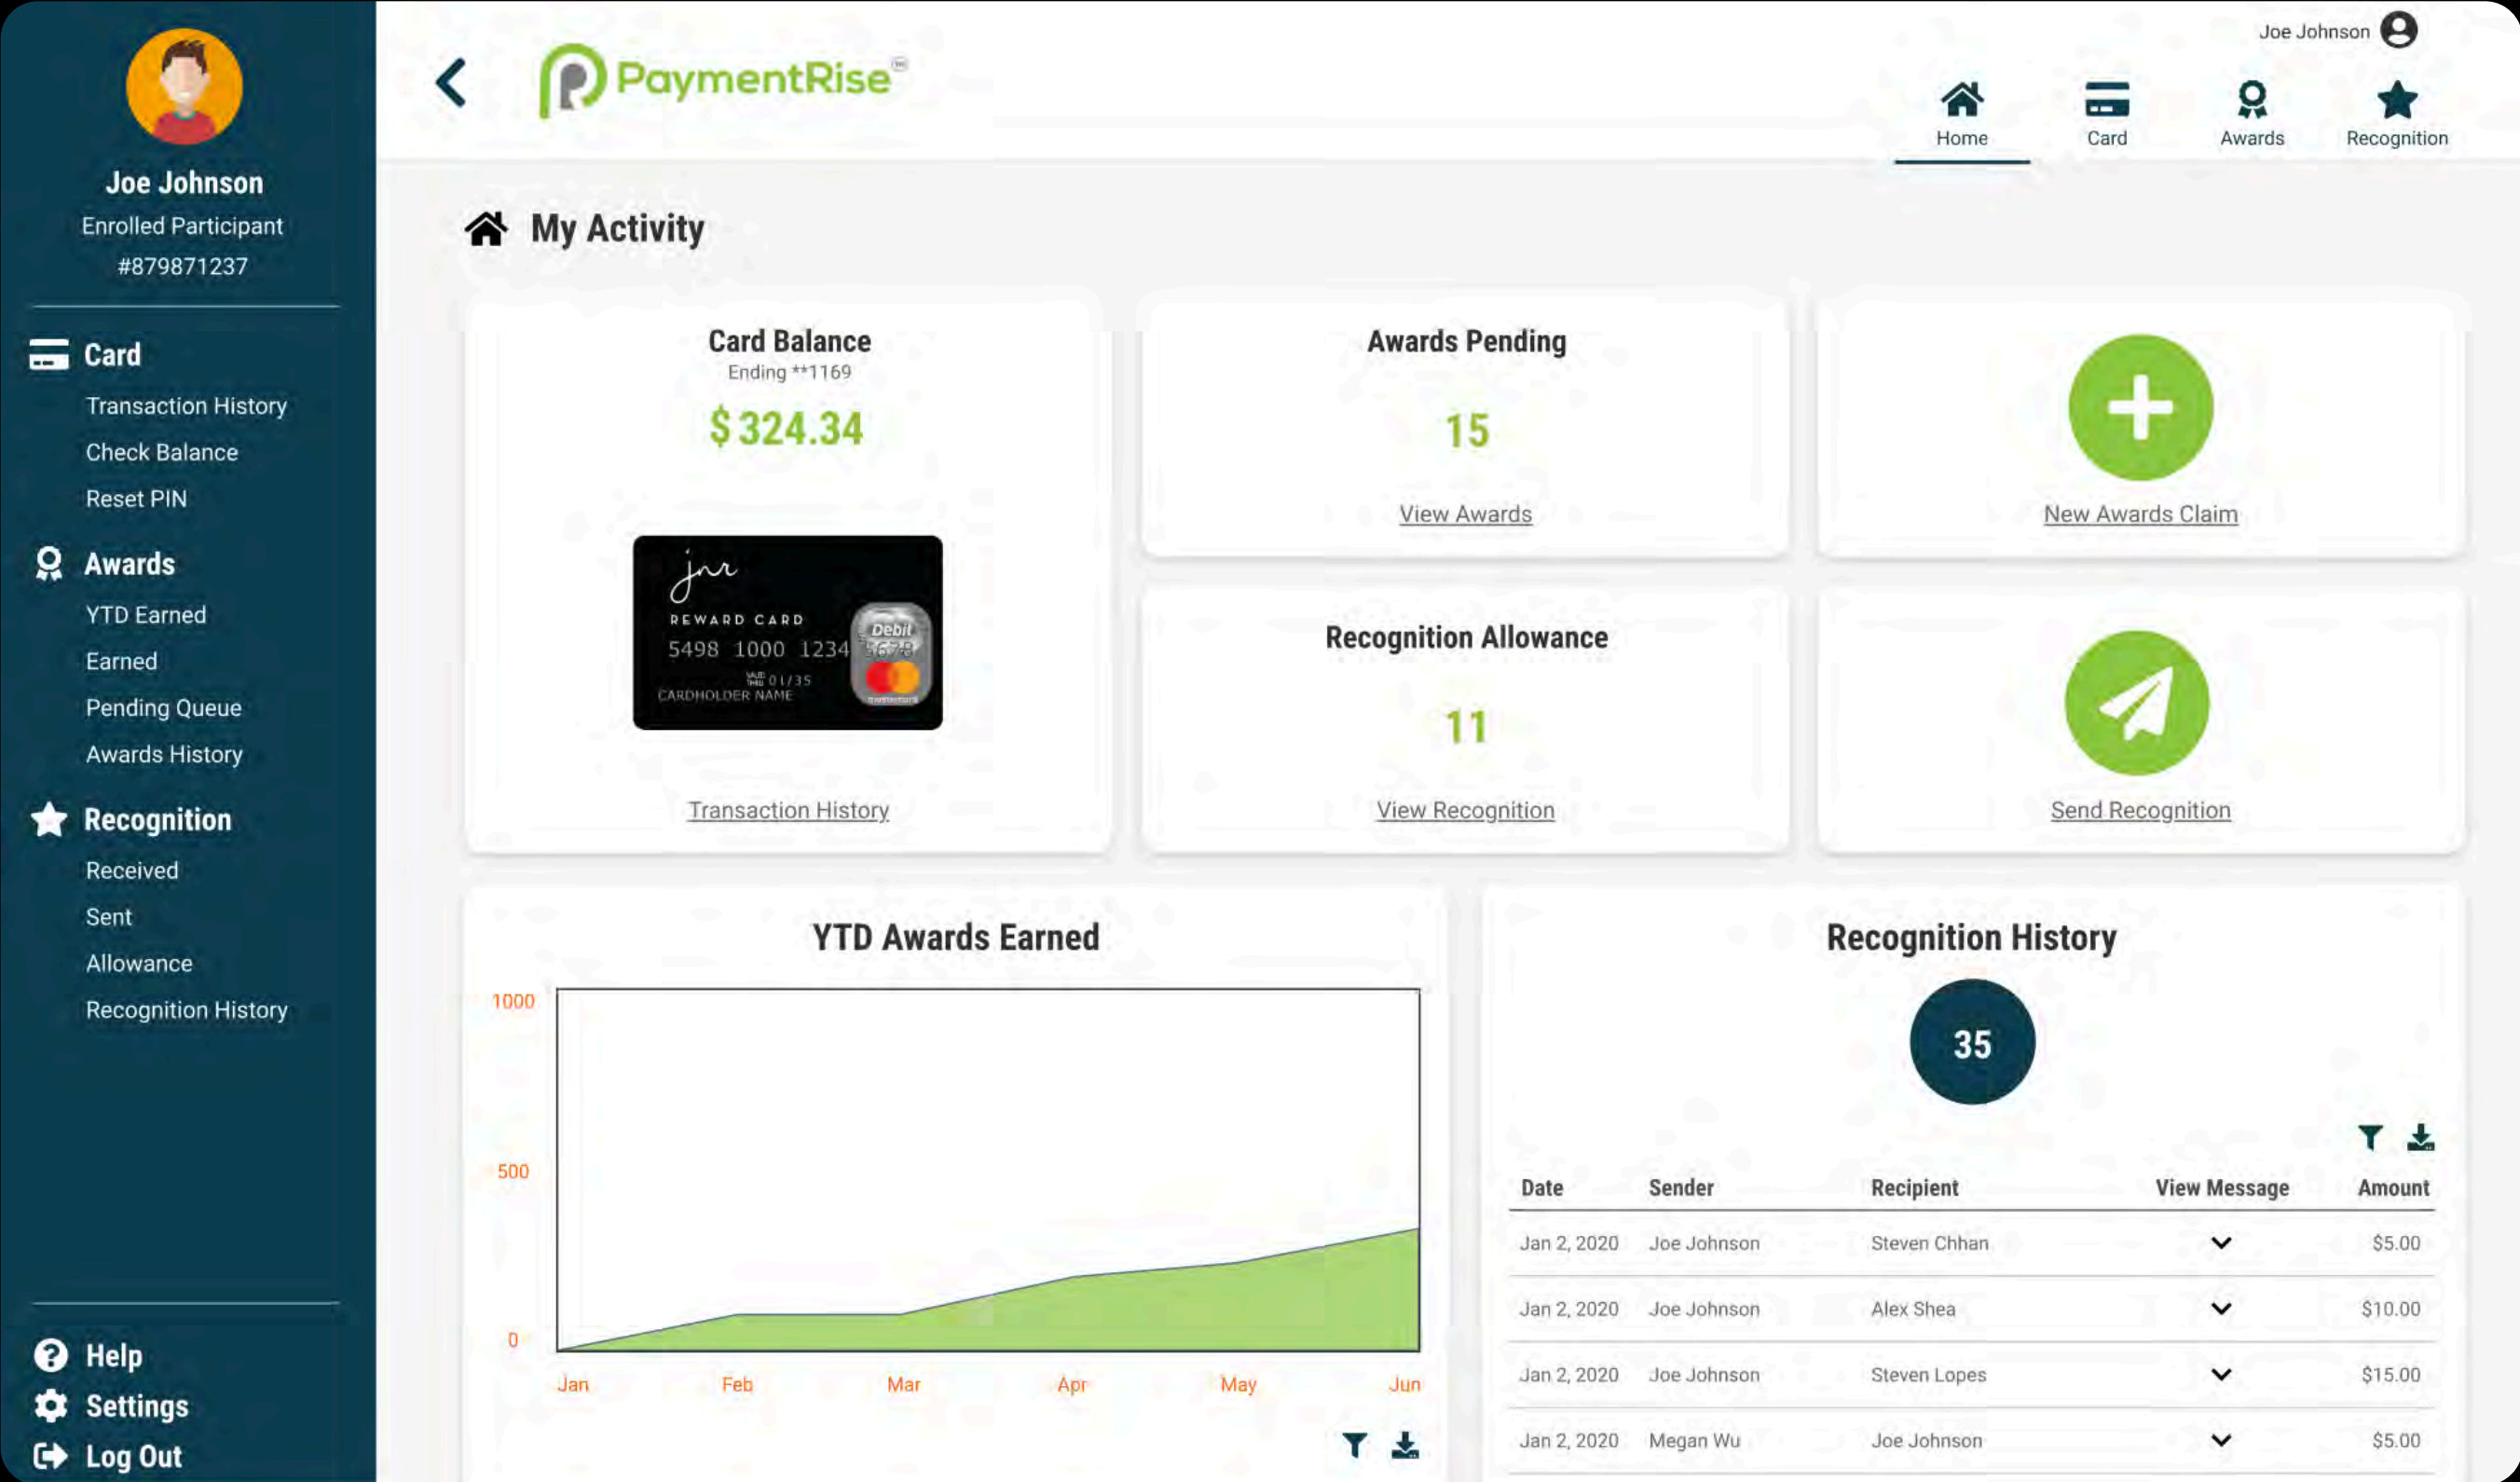

Delivered an MVP to retain existing customer and immediately alleviate the support team.

SCALE

Created a modular and scalable design for new features on the roadmap.

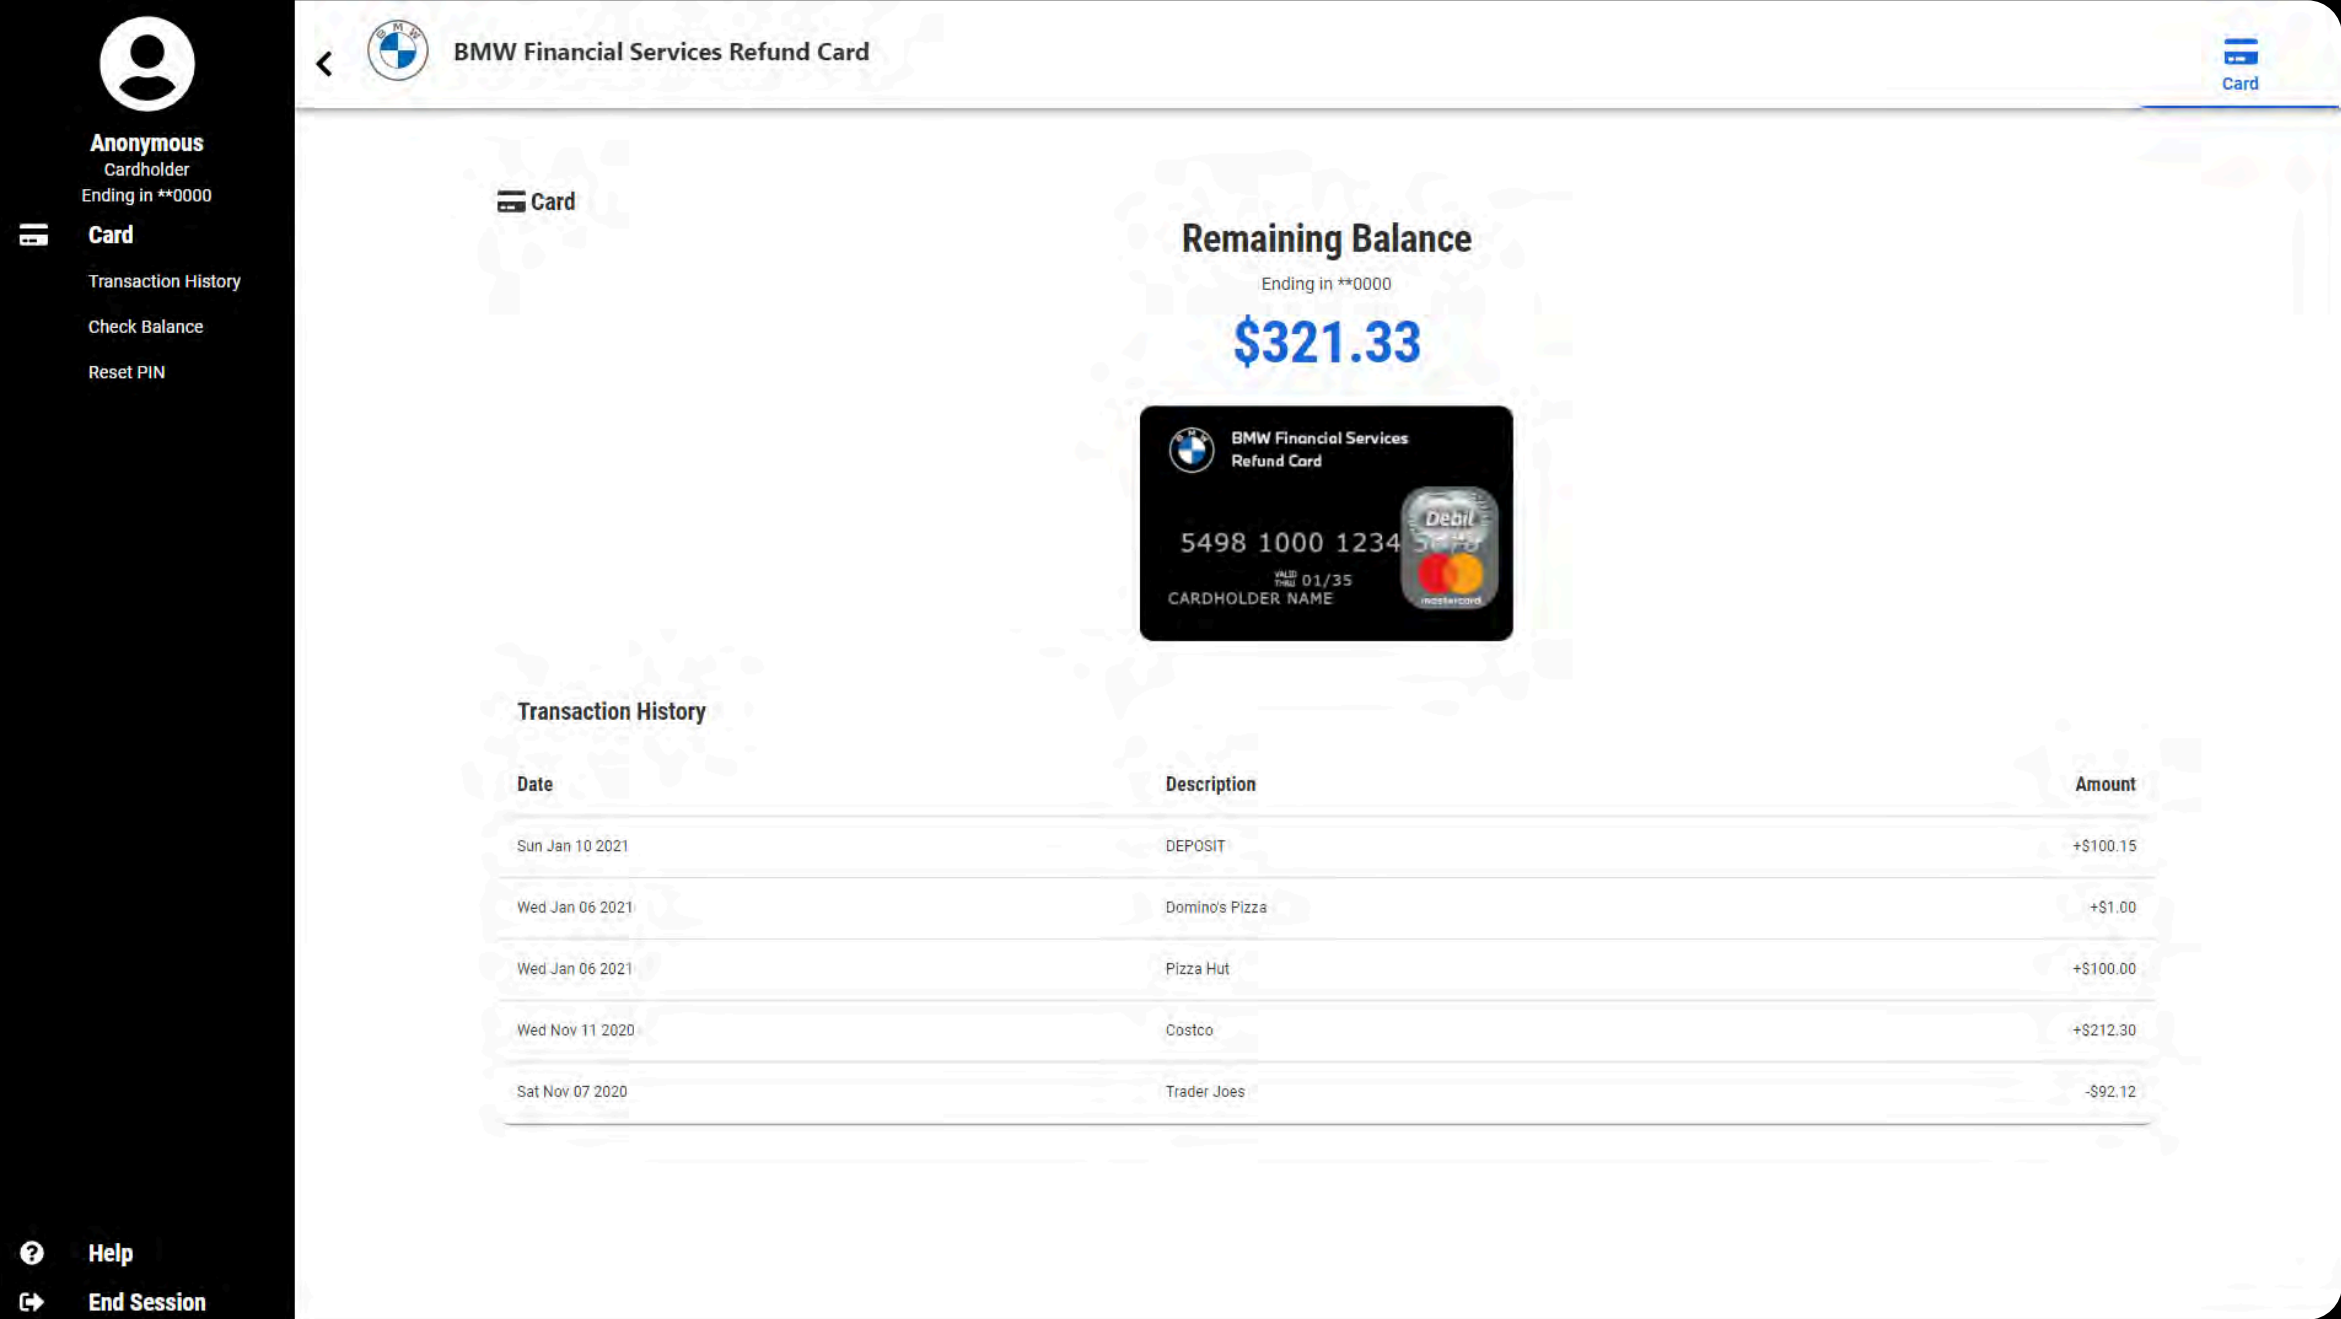

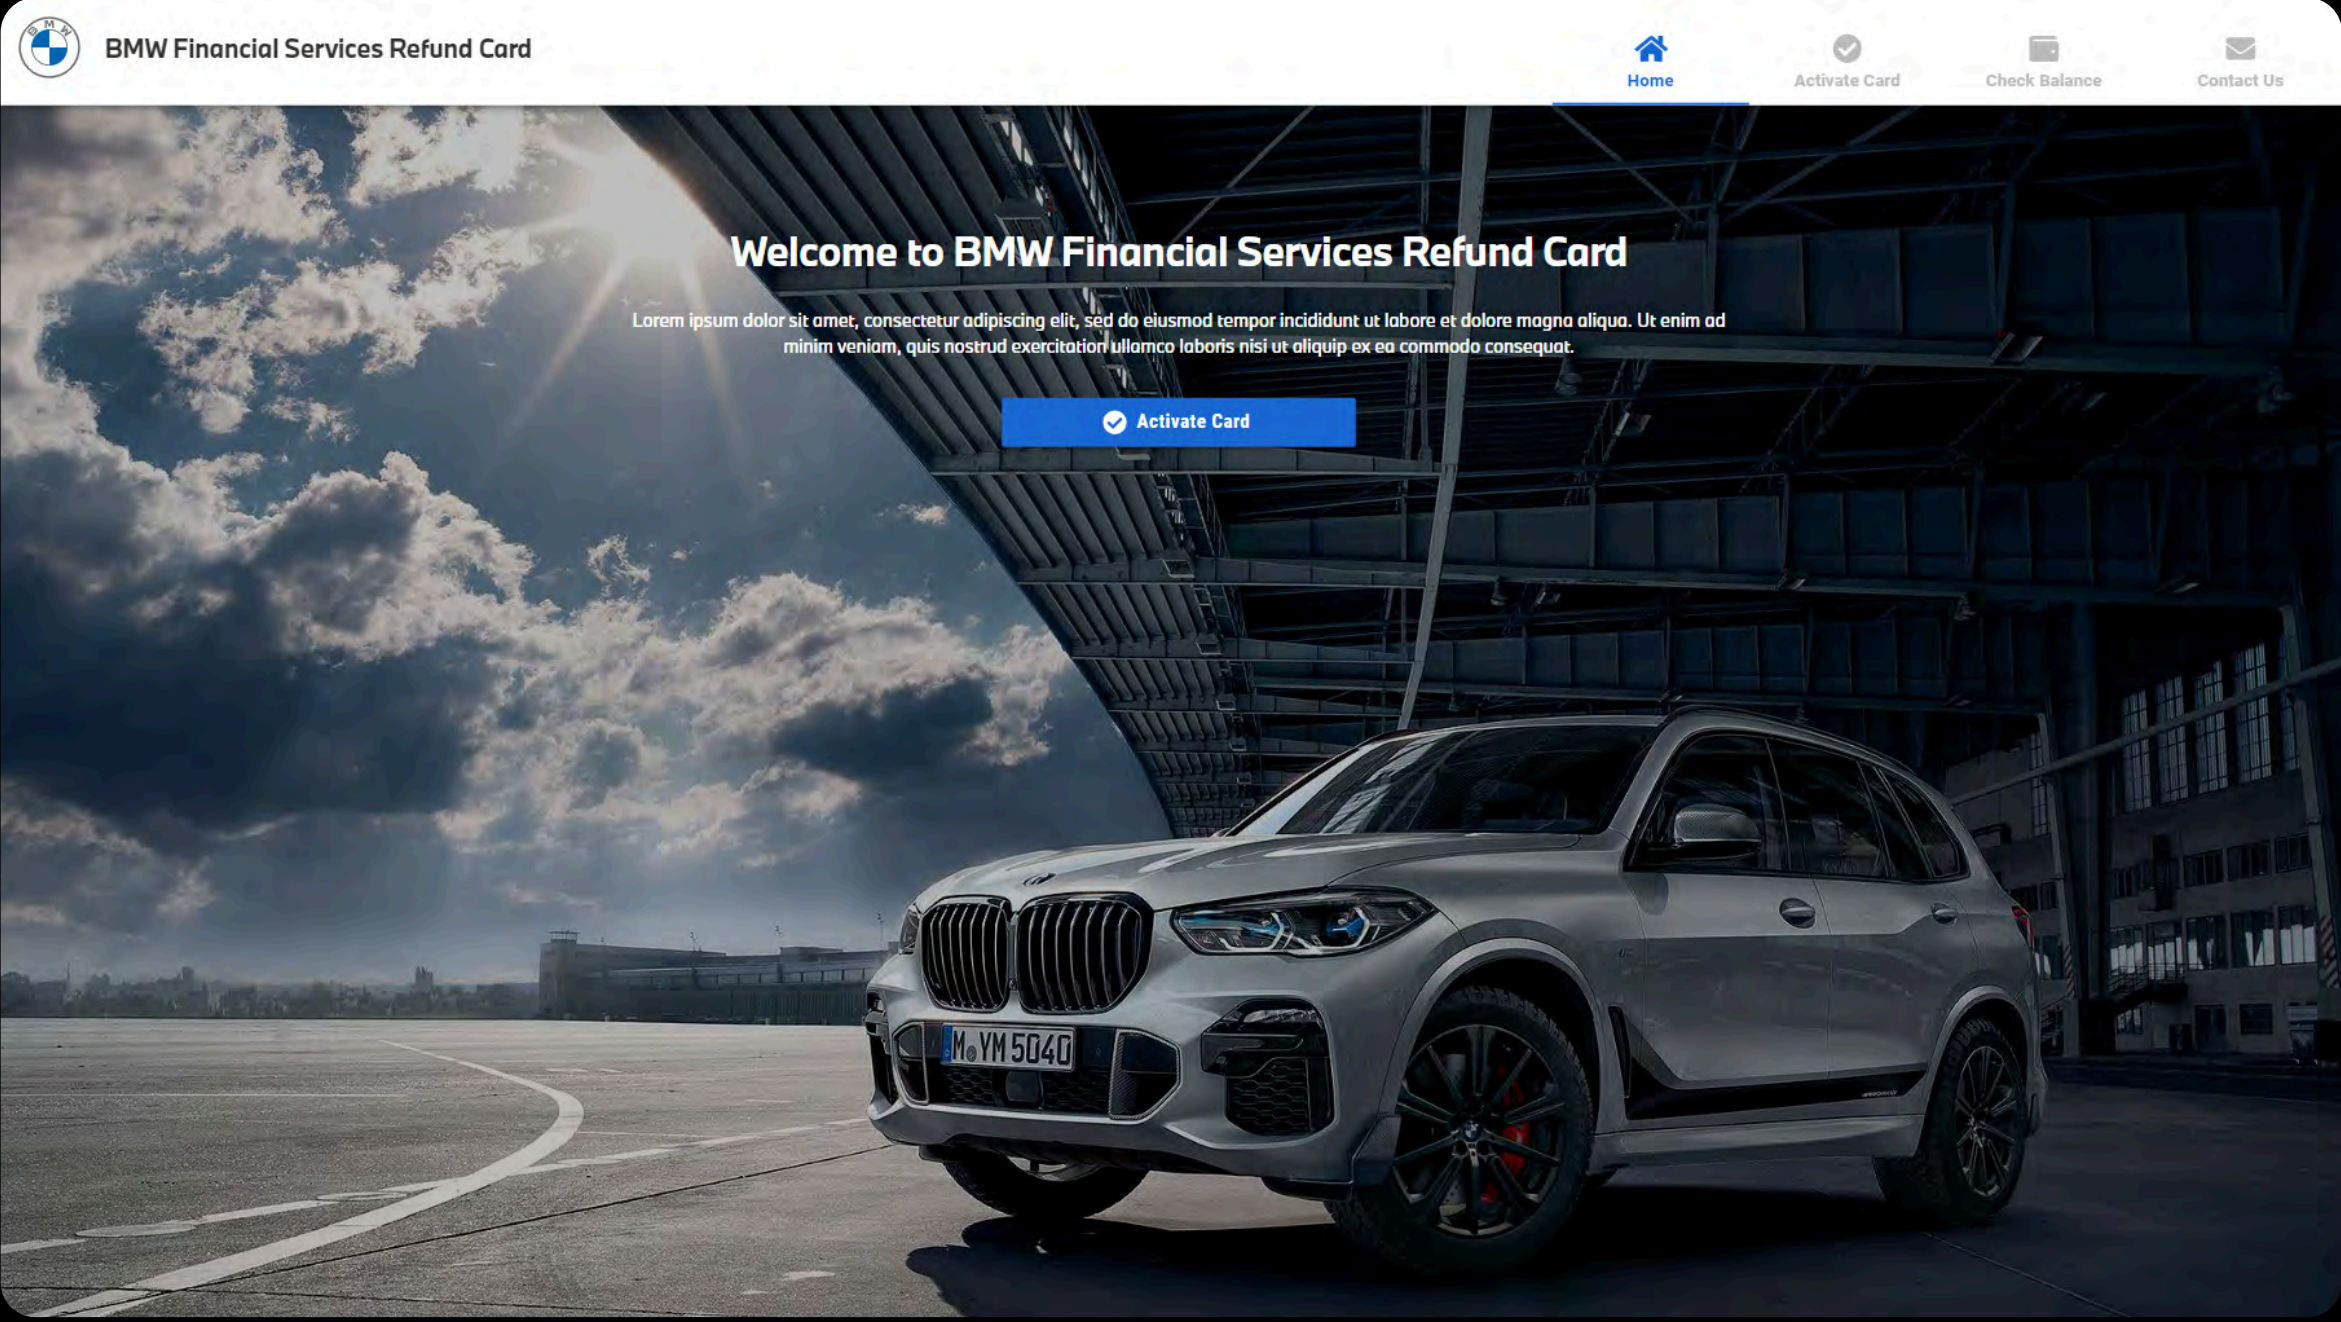

YIN & YANG

The platform has a well balanced design. There was enough information provided while having straightforward actions.

ROOM FOR ACTIVITIES

The modular design allowed flexibility for new features, premium packages, user permissions, and more.

WHITE LABEL

As we polished the requirements, we decided to white label the platform so clients can use their own branding.

01

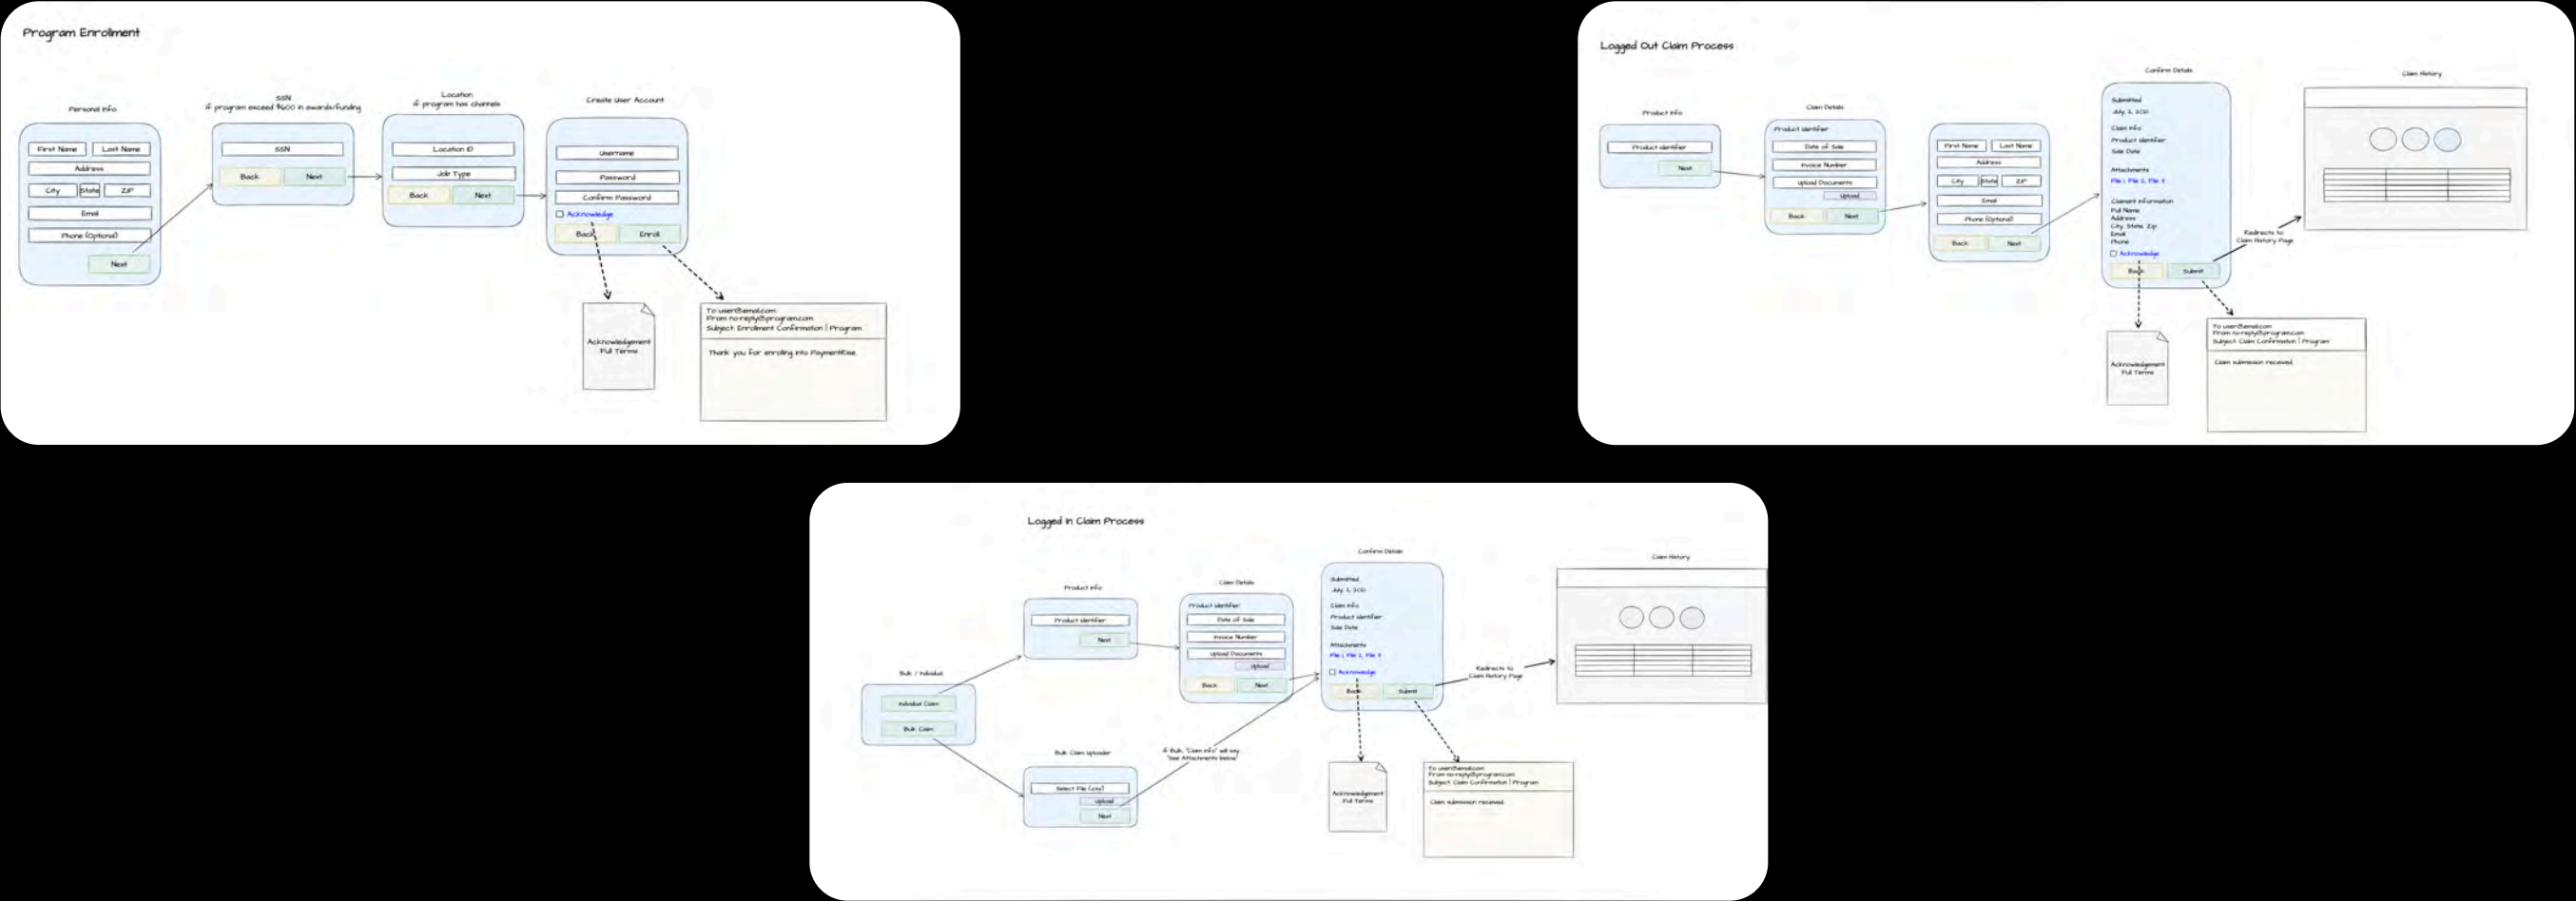

Firsts /
Journey

● HOW DID WE GET HERE

- Competitor Analysis
- Flow Charts
- Prototypes
- Testing
- Wireframing
- Design System

● SQUAD

- President of Prepaid
- Product Owner
- Product Designer (that's me!)
- Development

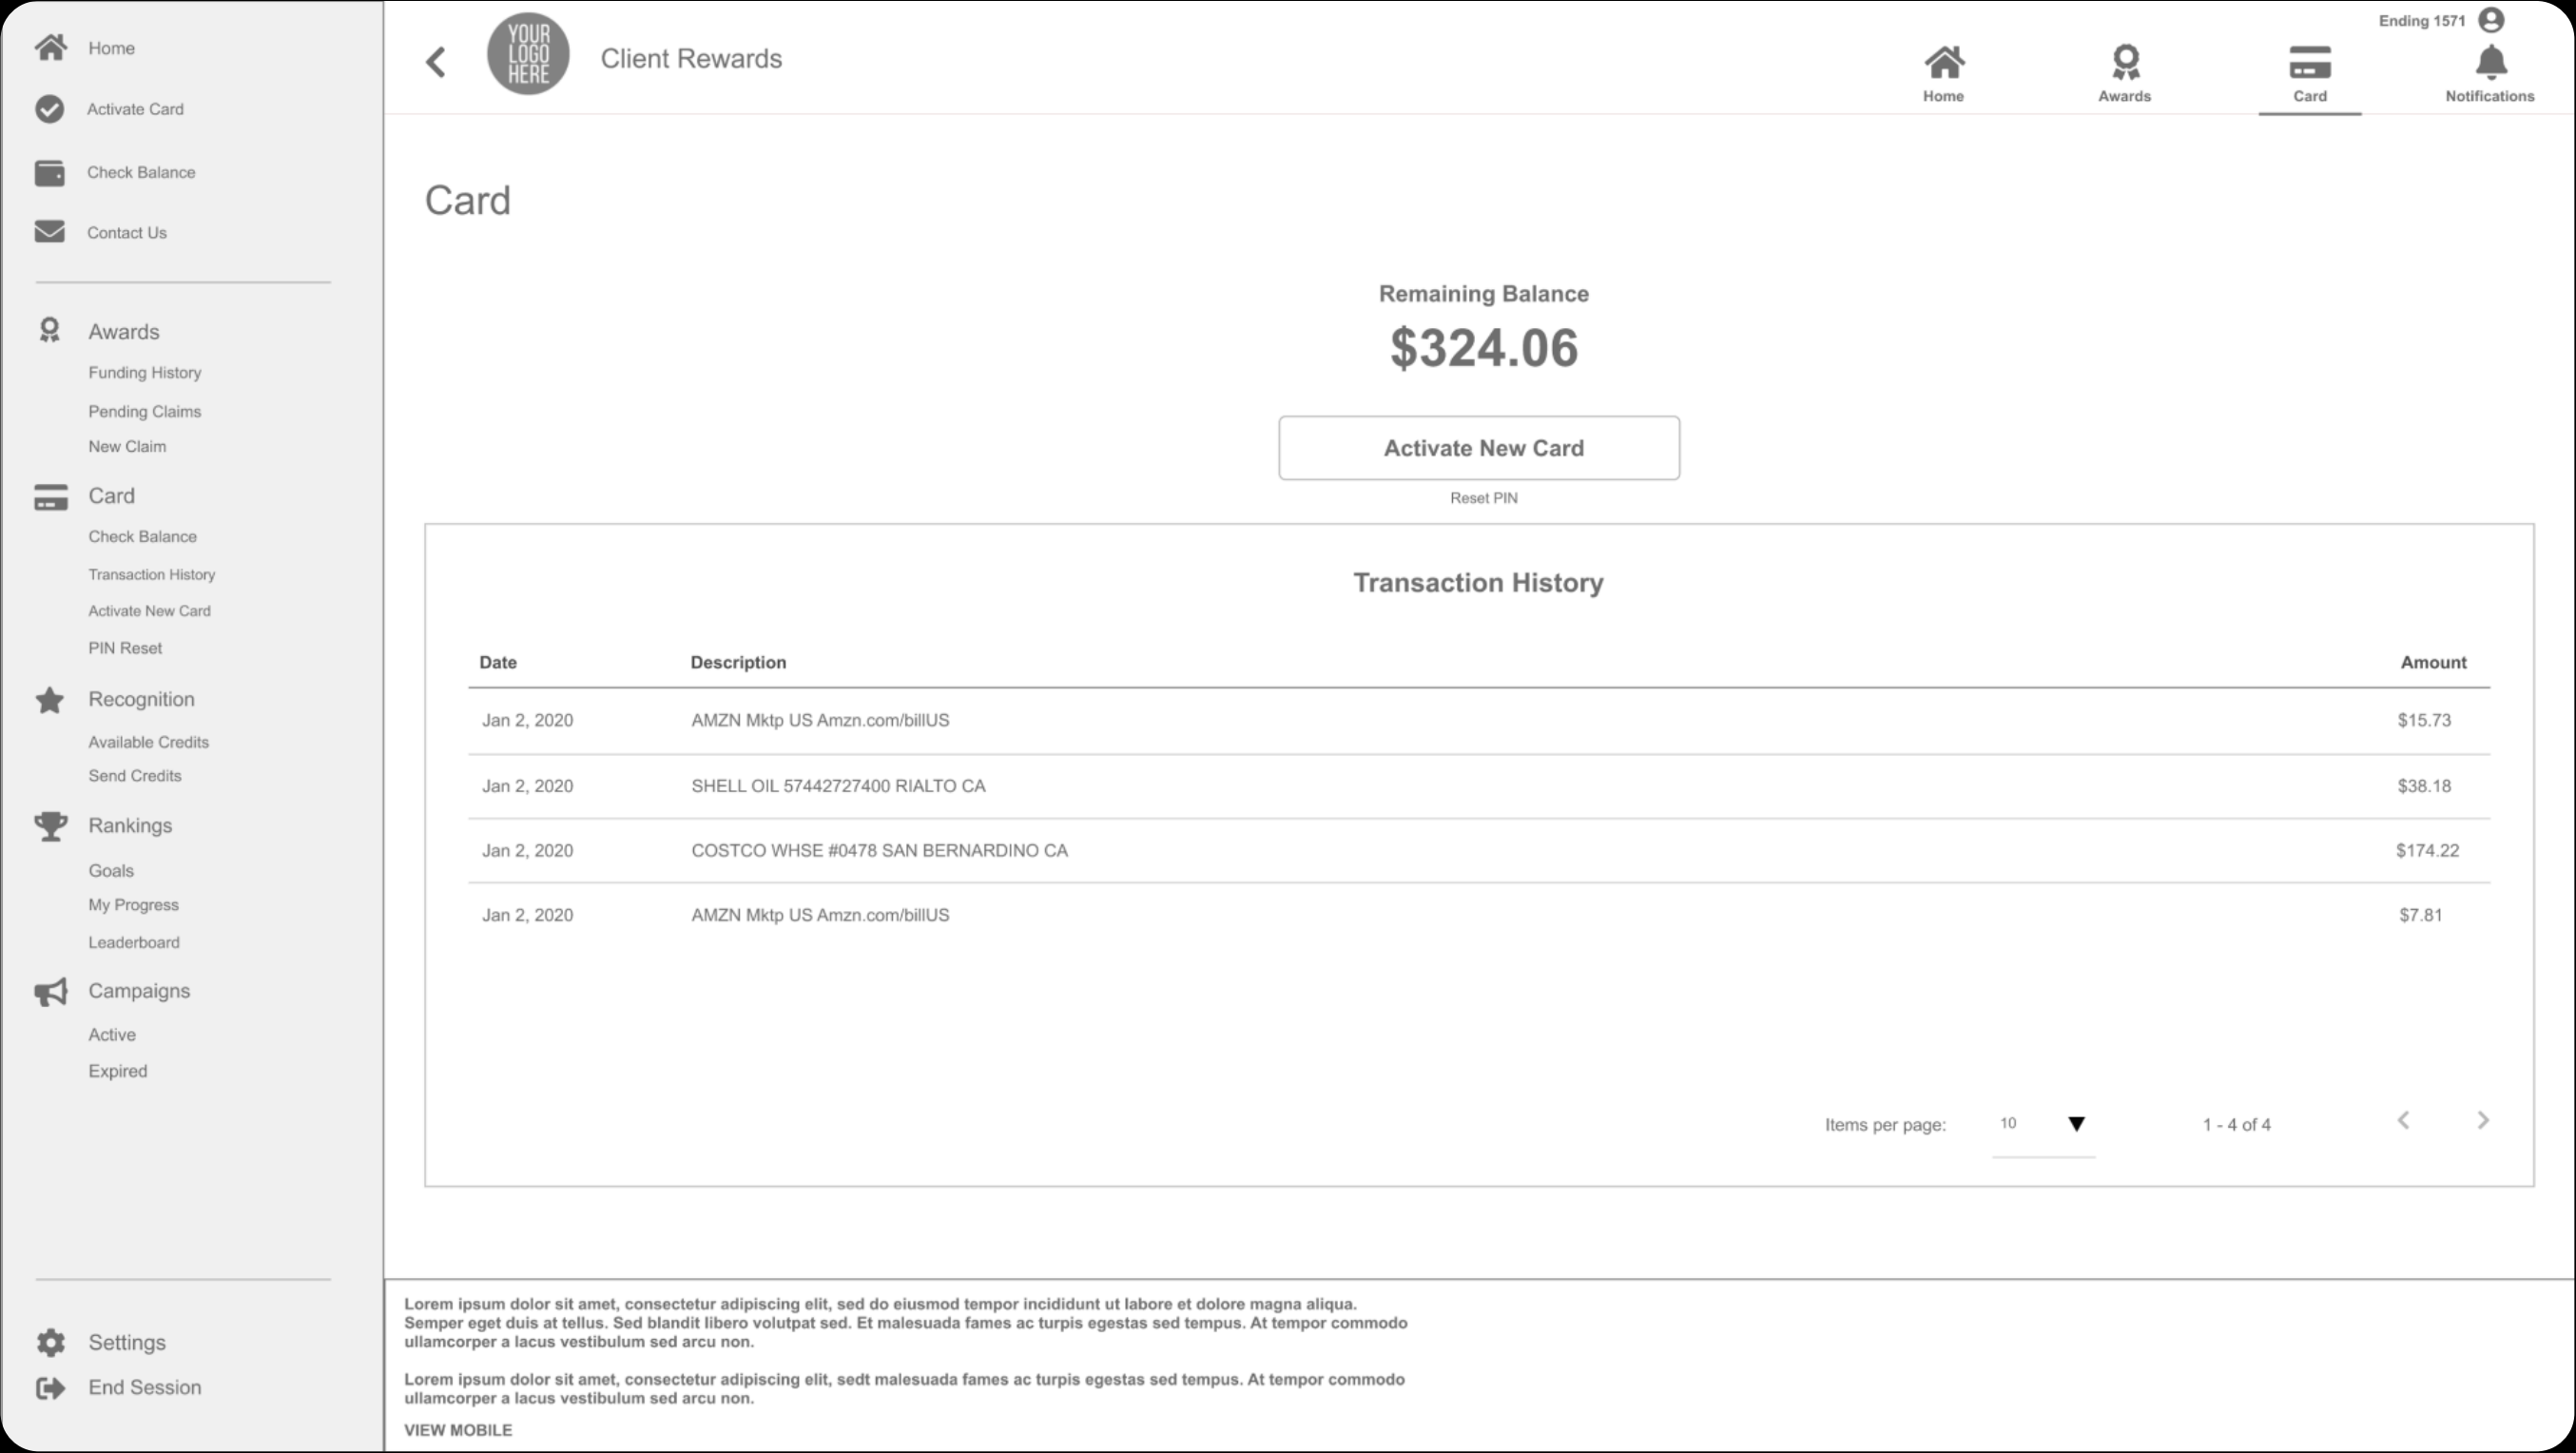

RESEARCH

Competitor analysis, studying workflows, and best ways to streamline

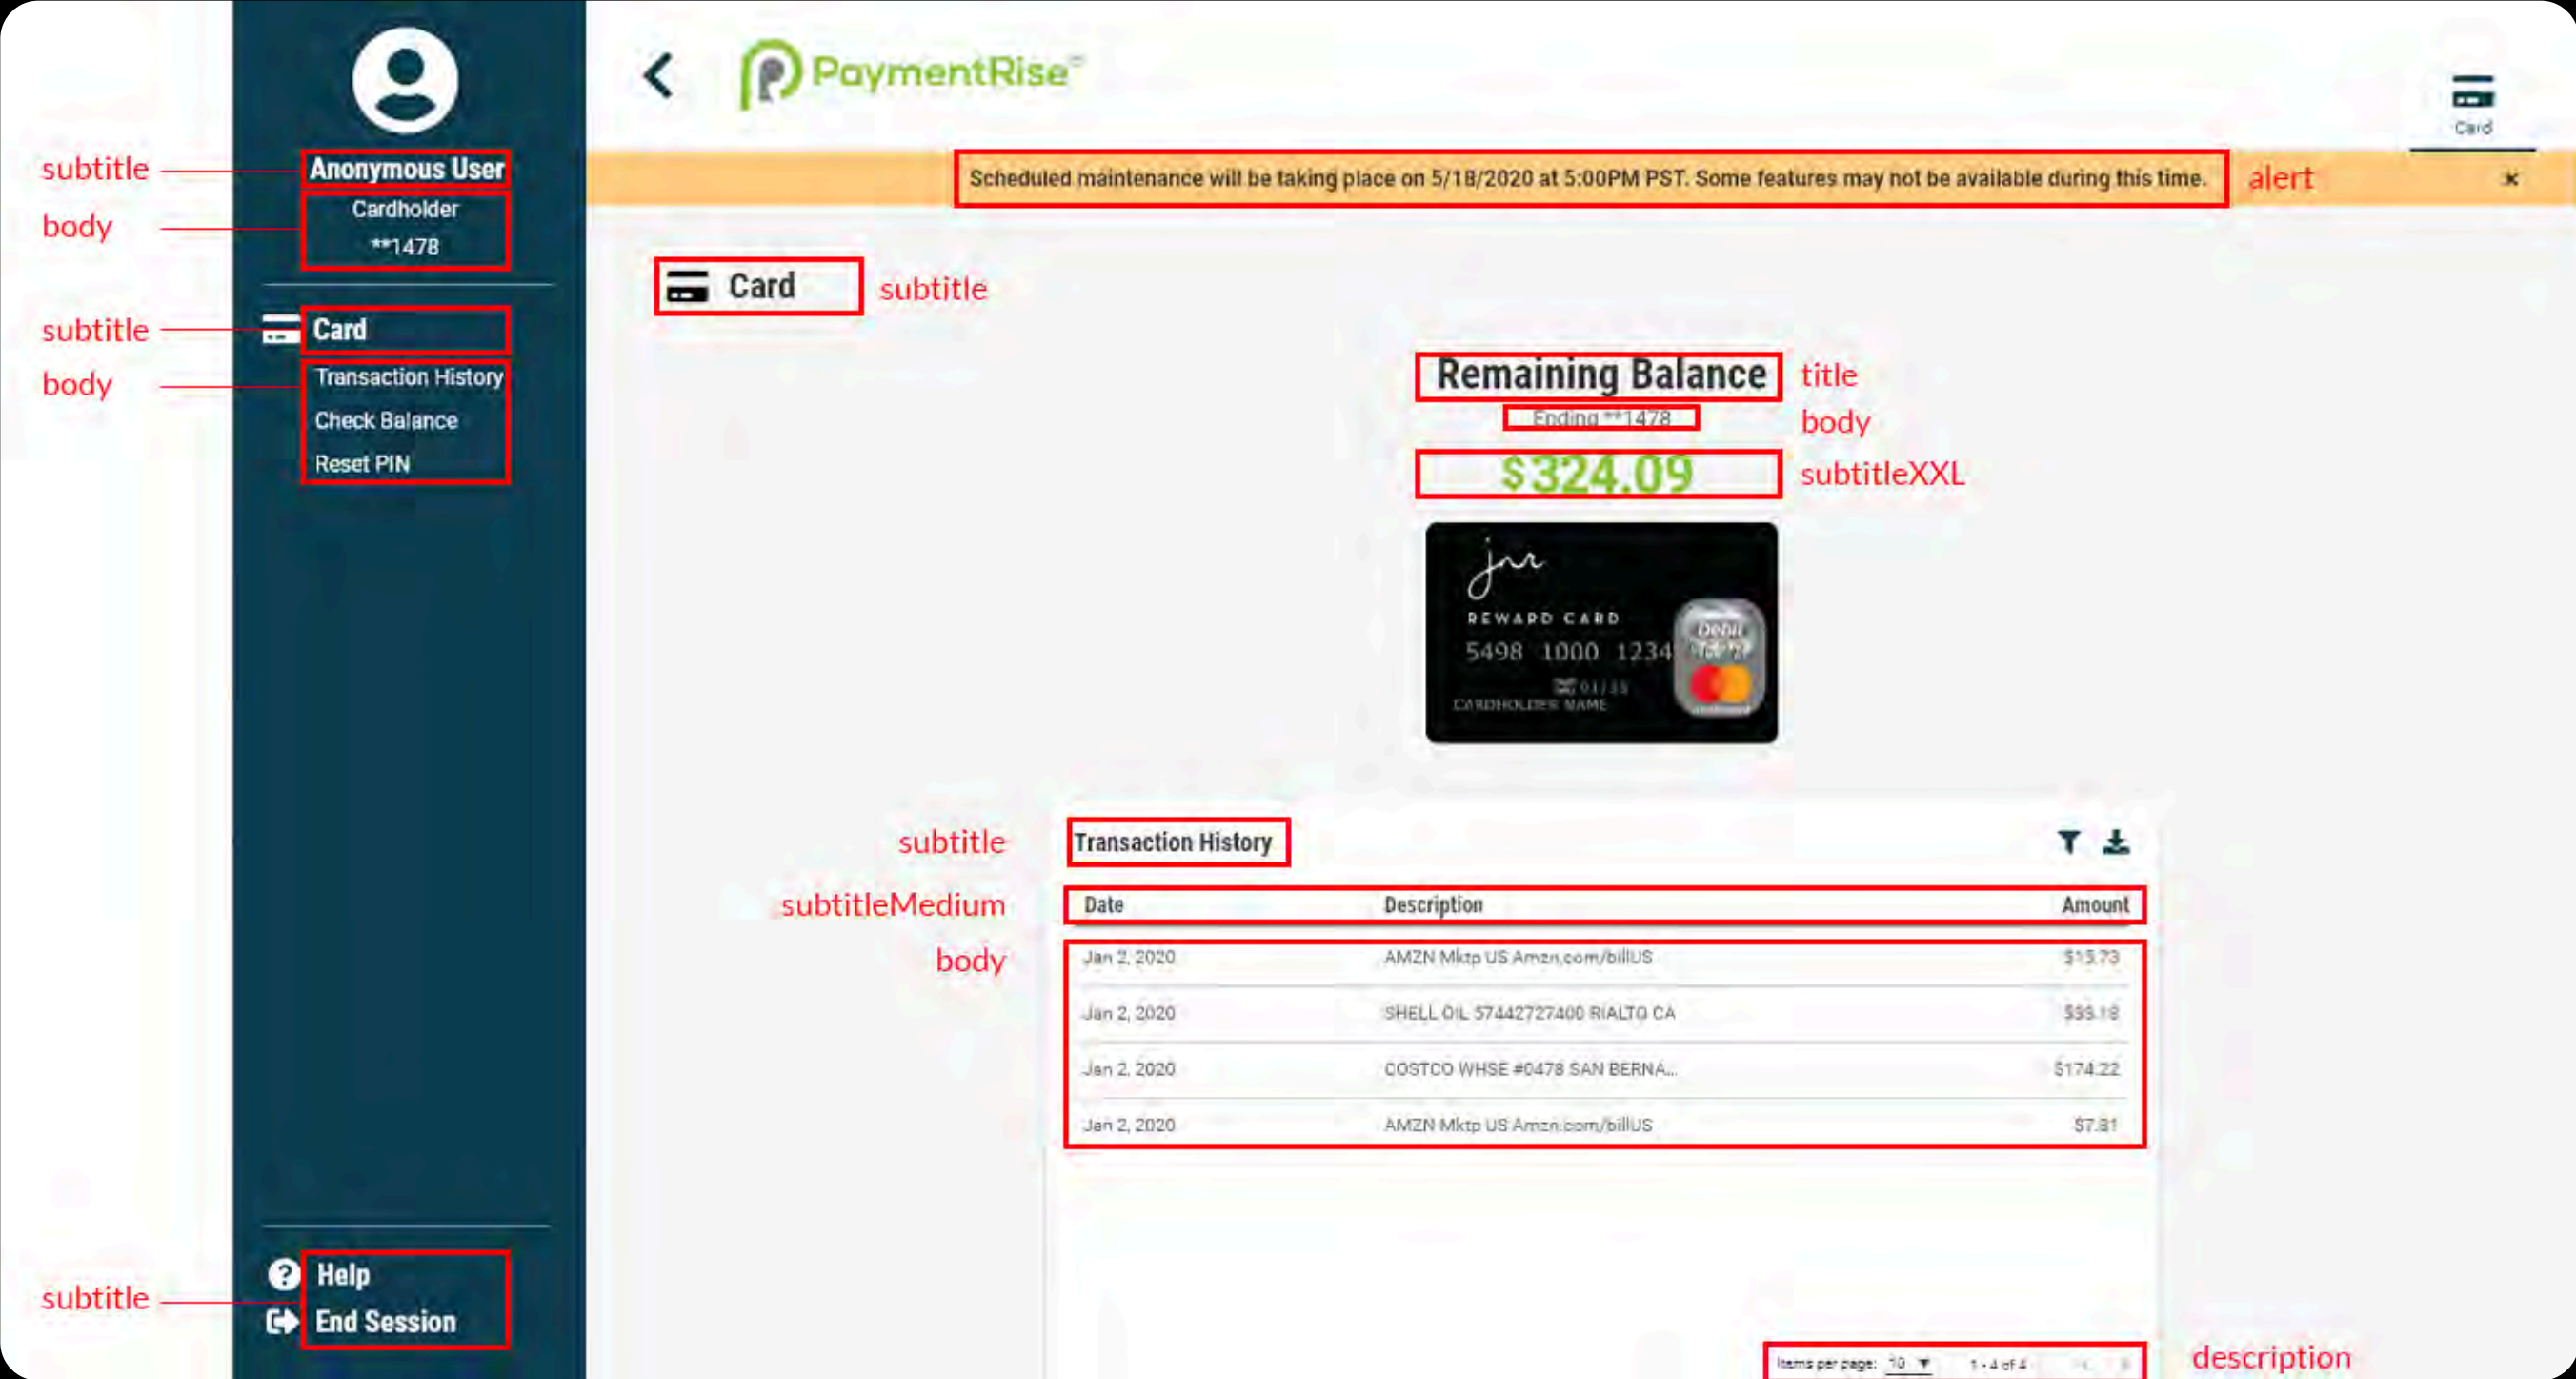

WIREFRAMING

Quick, colorless mocks that helped the team focus on the user experience over the interface.

```
const paymentRiseProgram = {
  styles: {
    template: 'essential',
    colors: {
      primary: {
        main: '#1C1D1D',
        contrast: '#FFFFFF'
      },
      secondary: {
        main: '#1C1D1D',
        contrast: '#FFFFFF'
      },
      accent: {
        main: '#FFCD00',
        contrast: '#000000'
      },
      neutral: {
        main: '#FFFFFF',
        contrast: '#FFCD00'
      }
    }
  }
}

base: {
  main: '#FFFFFF',
  contrast: '#000000',
  darken_coefficient: 0.2
},
appbar: {
  background: '#000',
  menuItem: '#FFF',
  indicator: '#FFCD00',
  programTitle: '#FFF',
},
drawer: {
  background: '#FFF',
  toggleIcon: '#FFCD00',
  menuItem: '#000',
  divider: '#1C1D1D',
},
footer: {
```

● DESIGN SYSTEM

I created a design system and worked in tandem with the development team.

This sped up both design and development significantly.

Furthermore, thanks to my engineering background, I understood how to create themes and white label the product.

01 Firsts / Results & Summary

‘FIRSTS’

- First for the industry
- First for the company
- First for our team

RESULTS

- Successful self-service platform
- Reduced calls to support by 60%
- In-house control and reliability
- Scalable product
- Streamlined internal processes

SUMMARY

Design trends change constantly, but thanks to the great efforts for scalability - in design and development - the product is still growing and being used today.

FOUNDATION 02

02
Foundation /
Situation &
Tasks

SITUATION

The company’s product integrates with accounting software to process payments.

The product was created without UI/UX input and relied on Telerik framework/libraries.

There were no design standards and inconsistent UI/UX that led to unexpected behavior.

TASKS

- Create designs that matched the company’s branding.
- Standardize workflows and designs.
- Ensure the user experience is consistent and easy to learn.

Current Workflow

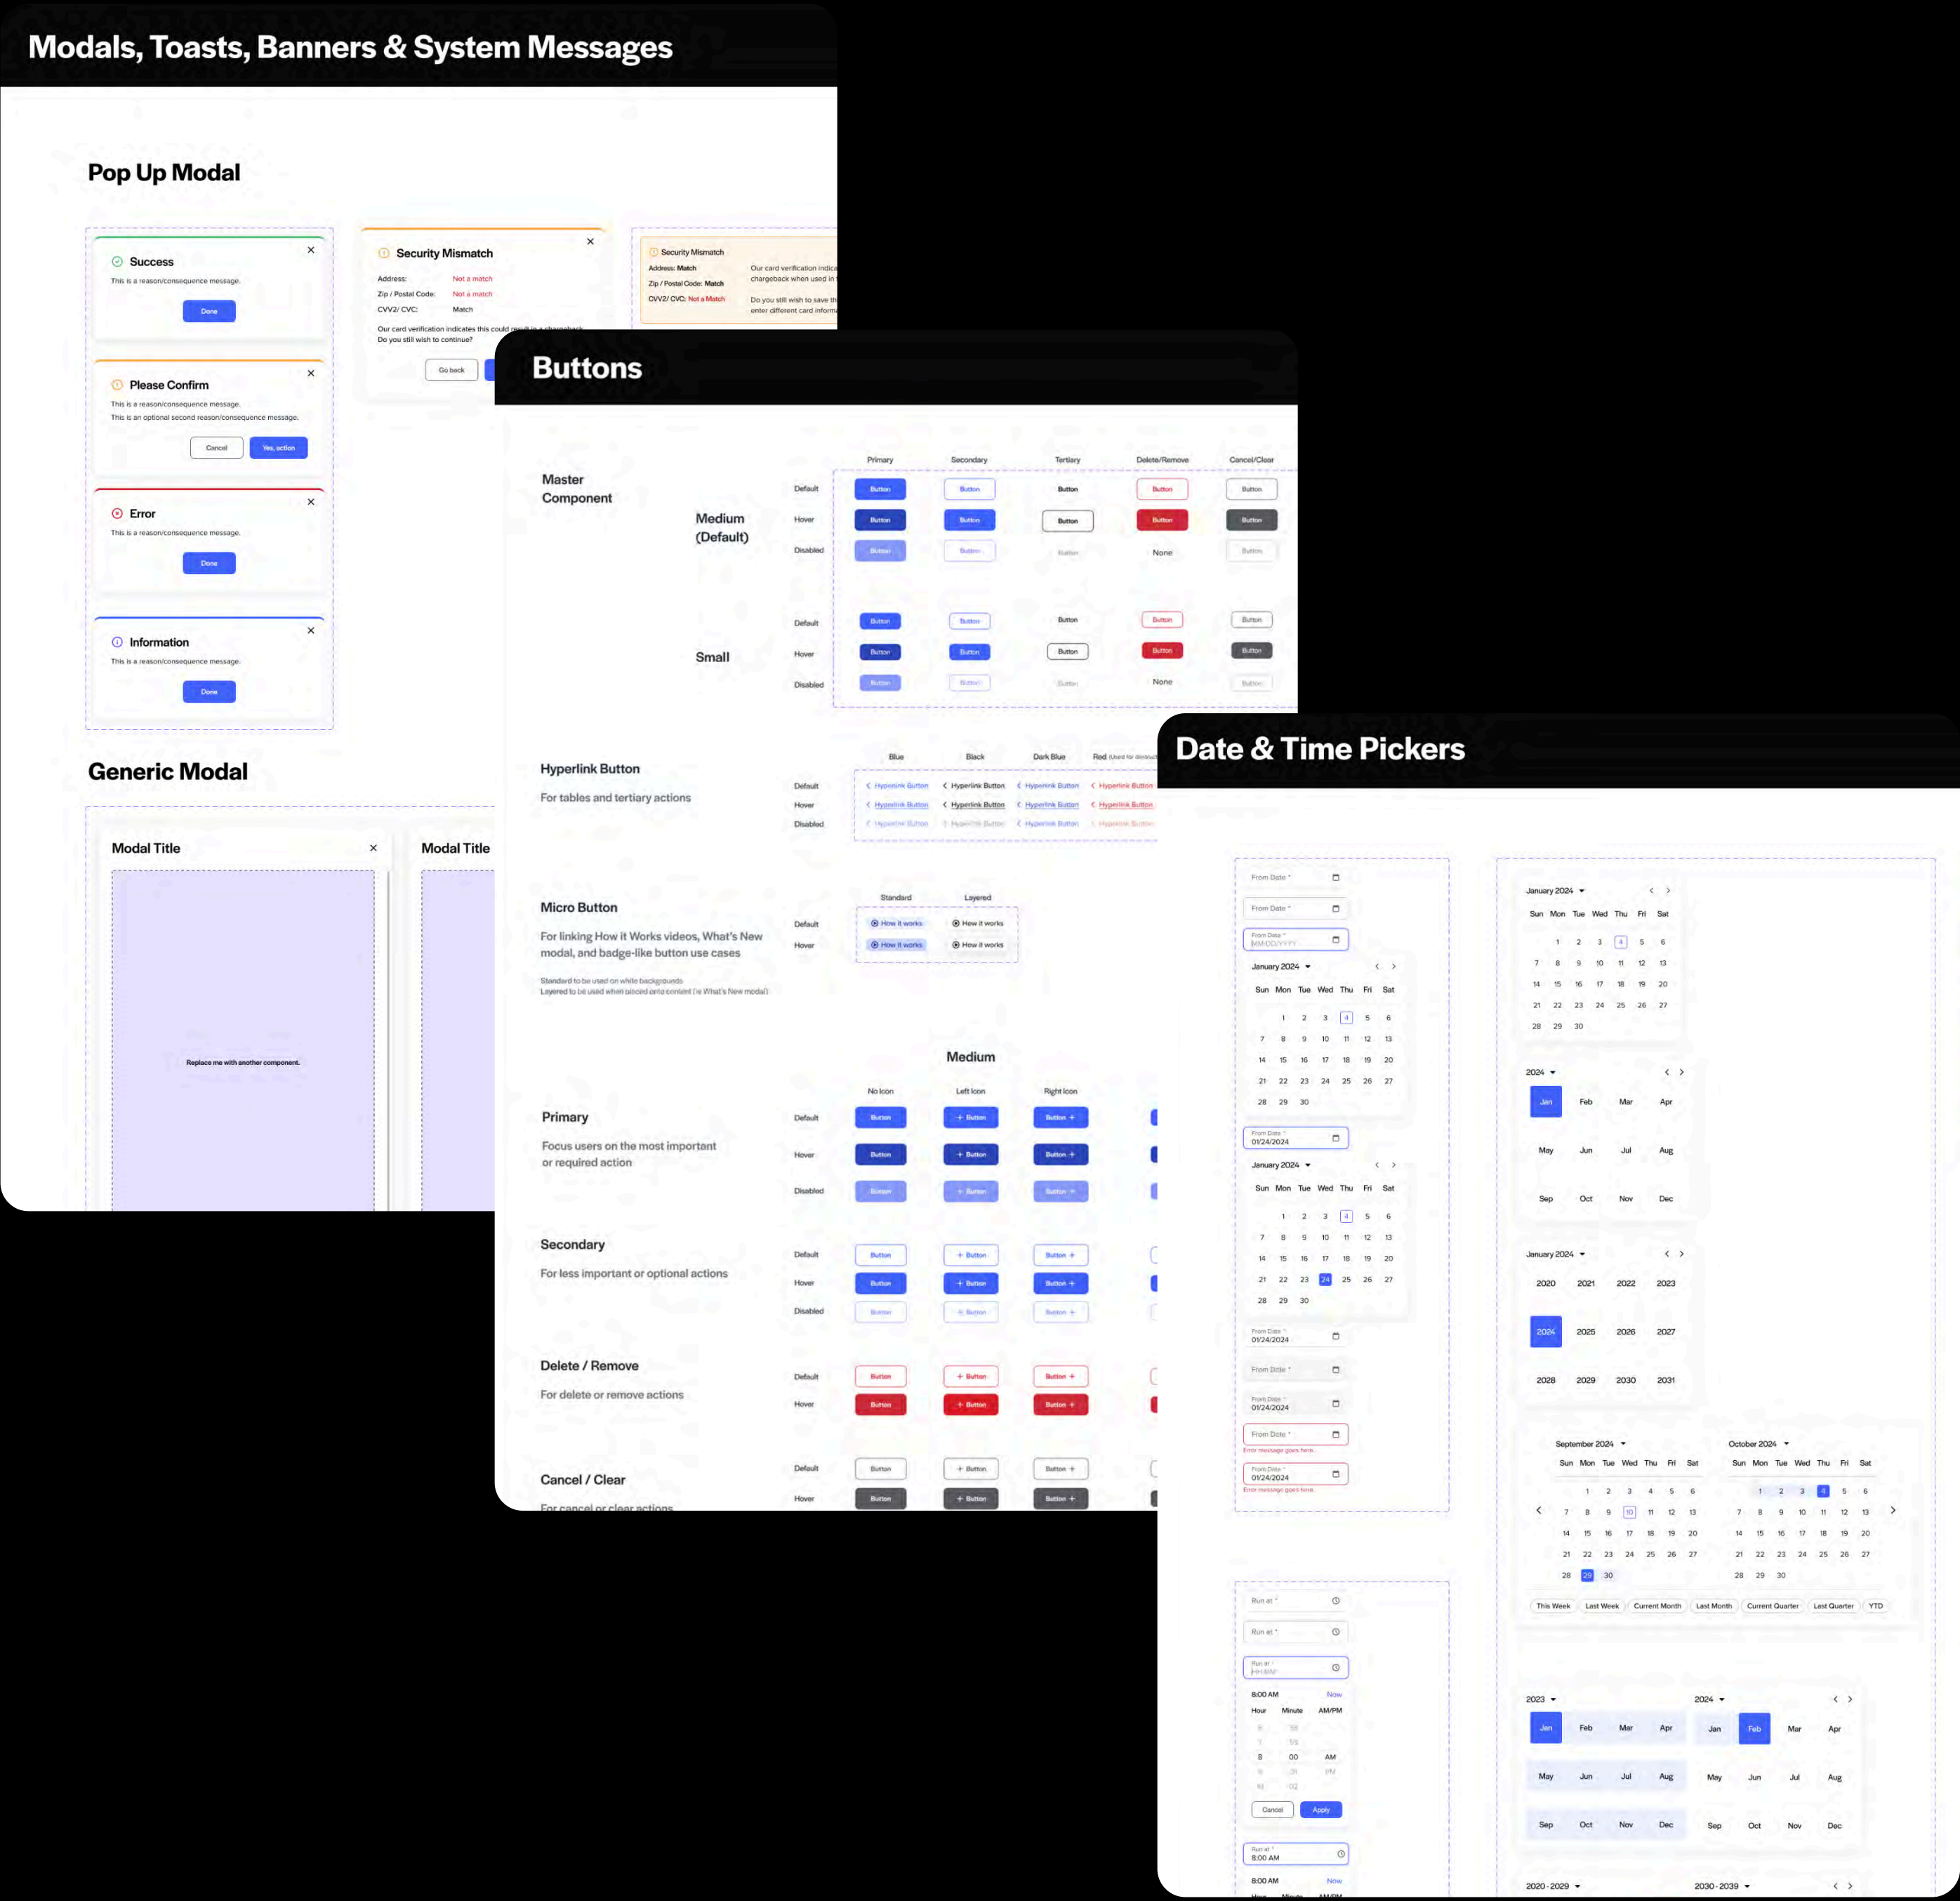

WORKFLOWS

Streamlining the workflows across all integrations provided seamless adoption.

CONSISTENCY

Allowed a consistent and familiar user experience throughout the product.

● COMPONENTS

Created a design system based on existing function.

● GUIDELINES

Improved communication with developers by providing thorough design guidelines.

● FUNCTION

Each component had a specific purpose. Isolating into atomic components helped define each element.

02

Foundation /
Journey

●

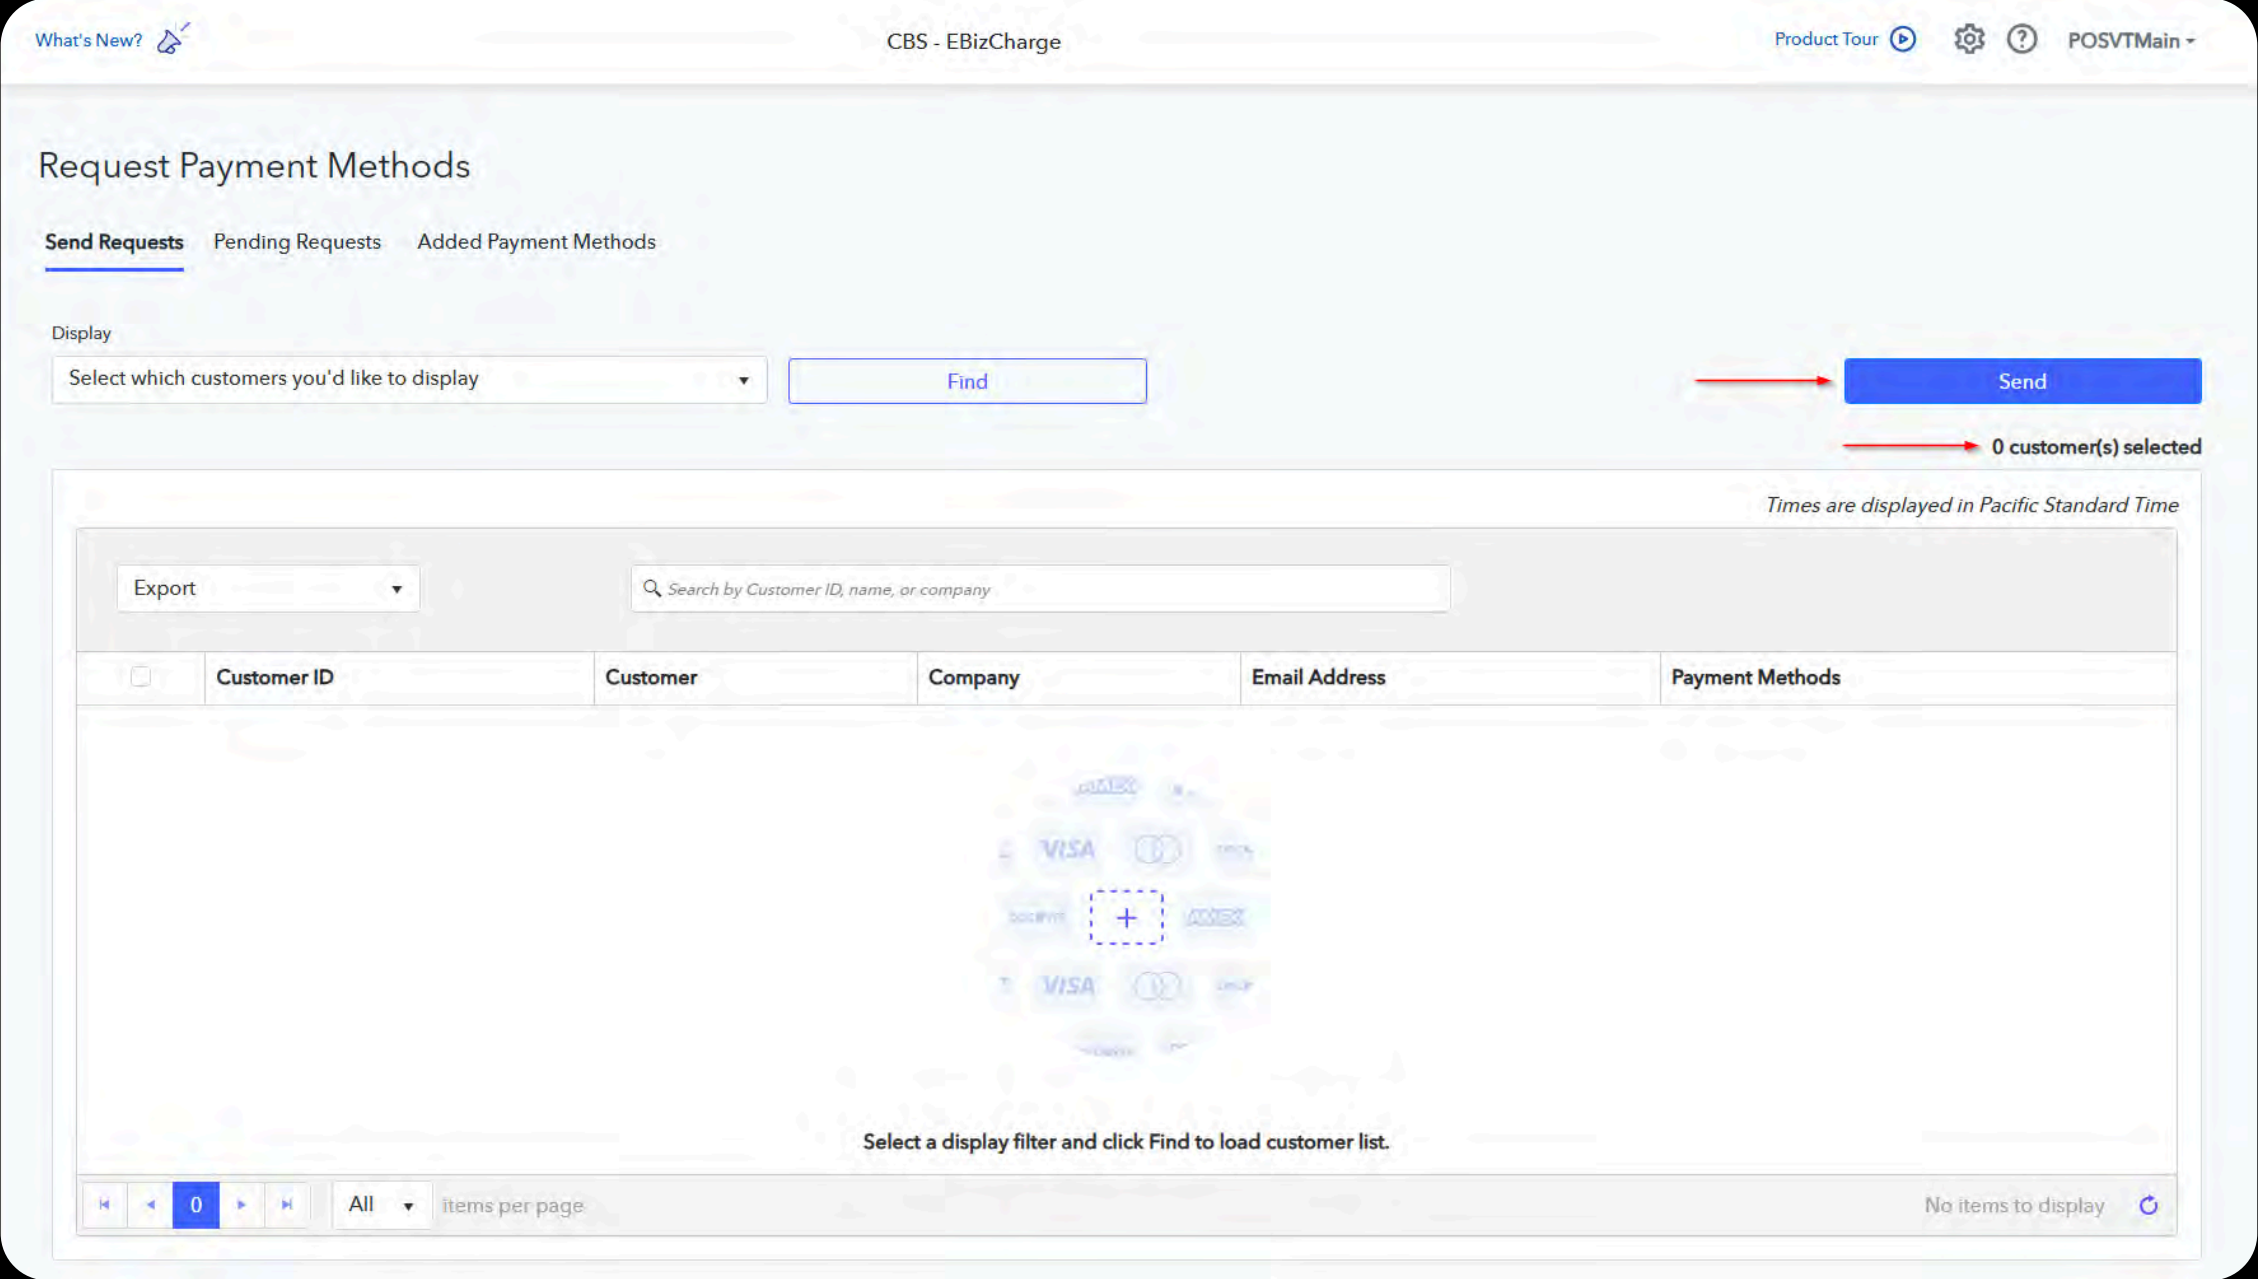

HOW DID WE GET HERE

- Identify
- Competitor Analysis
- Flow Charts
- User Testing
- Educating the Team
- Design System
- Design Review

●

SQUAD

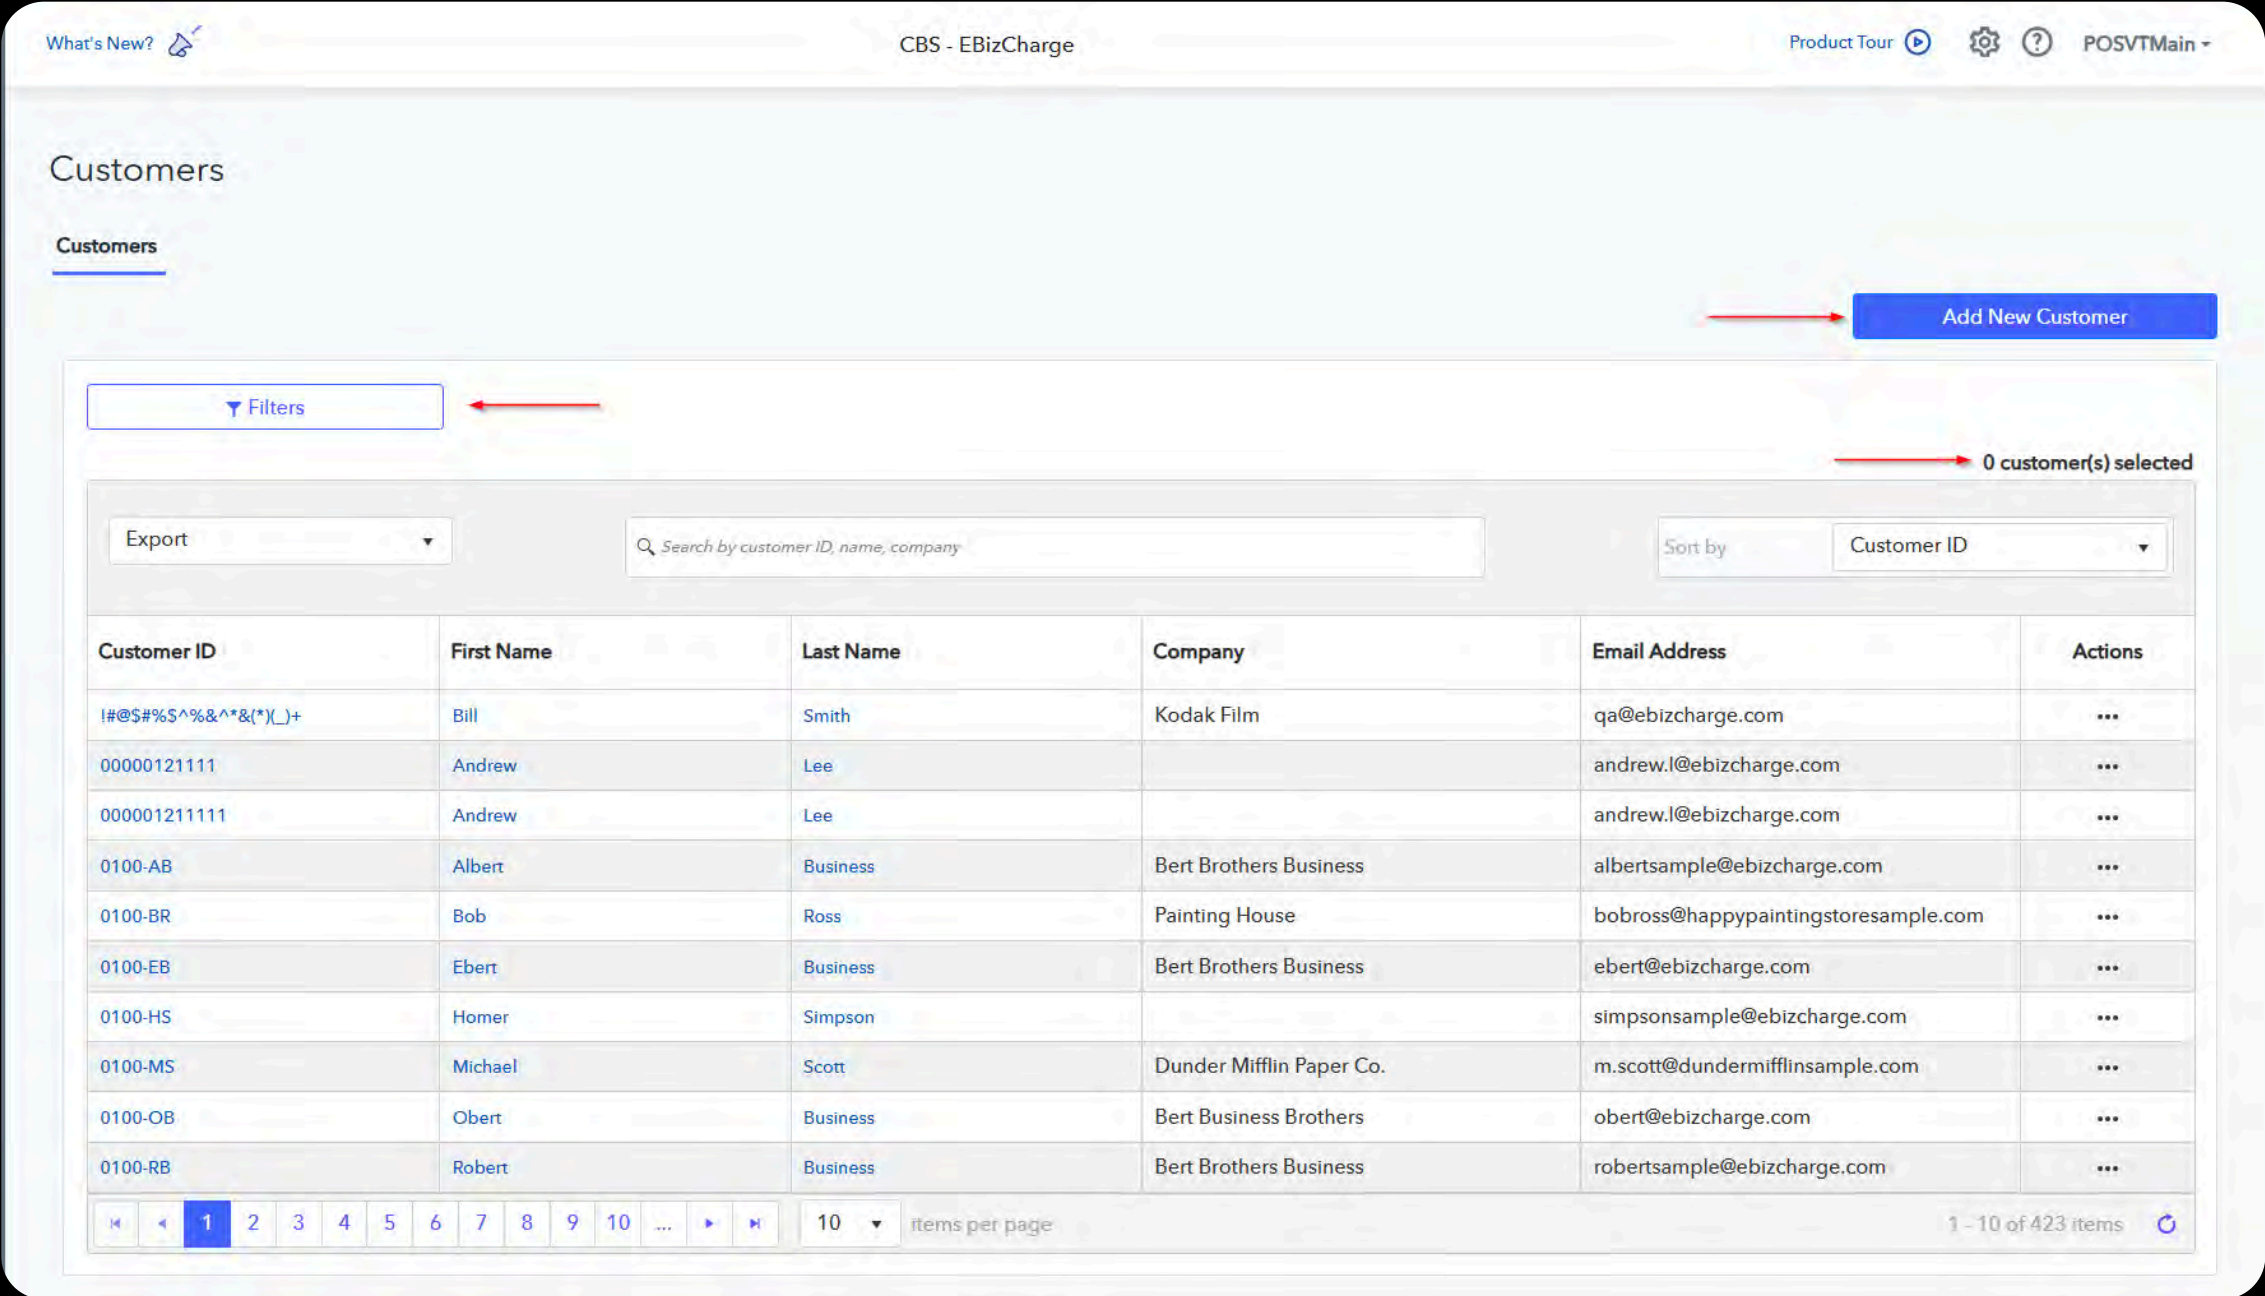

- CTO
- VP of Product
- Design Manager
- Product Owners
- Product Designers
- Development

IDENTIFY

Identifying the design inconsistencies in the existing product. This included the use of CTAs, padding, sizing, input fields, and more.

Workflows were also inconsistent. It can be the same UI, same placement, but have a completely different behavior depending on the module.

DESIGN TO DEV

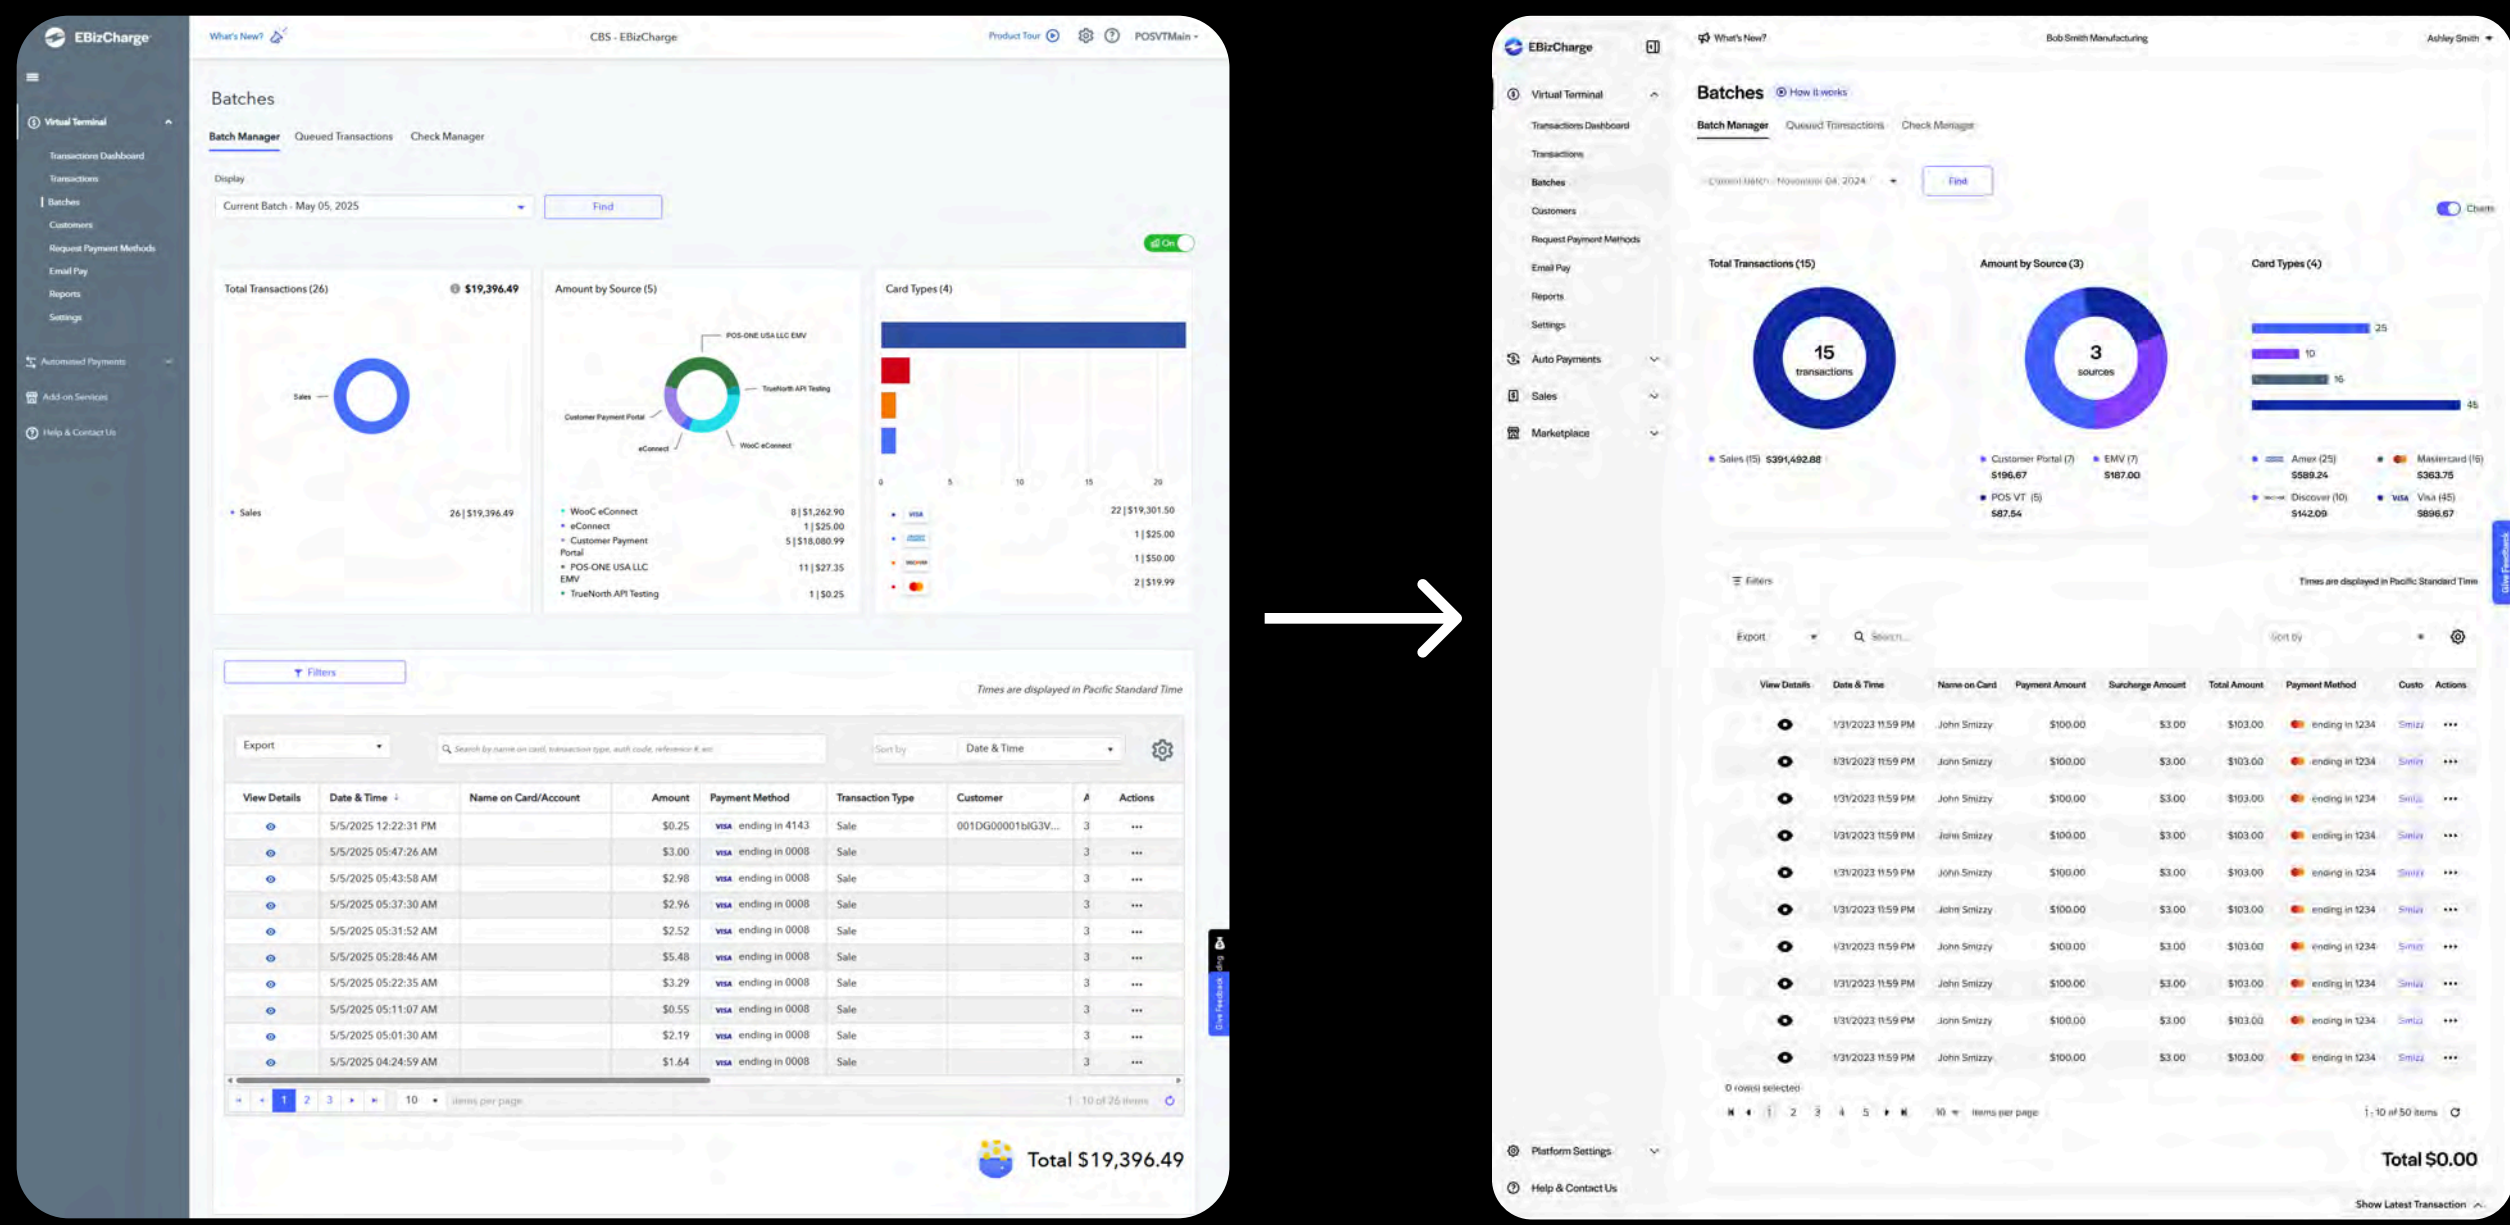

Creating a design system was familiar territory. I was able to lead the team with creating a scalable design system.

Utilizing Figma variables helped bridge the gap between design and development.

TWO BIRDS, ONE STONE

Creating a design system and developing components is a huge task. It was the right time to improved the UI and introduce better workflows.

02 Foundation / Results & Summary

‘FOUNDATIONS’

- Created a better design and development foundation
- Introduced standards
- Set up for success

RESULTS

- Streamlined internal processes
- Streamlined design work
- Reusable component library
- Reduced development cycles
- Reduced QA overhead
- Confidence with scalability
- Fixed consistency throughout the product
- Modernized UI
- Better product for users

SUMMARY

Creating design systems is a significant investment in both design and development. While the upfront cost is high, the long term benefits are unmatched. A snowball effect takes place once the system is in place. Designers, product owners, developers, and QA all save time. Processes become smoother, and focus can shift to higher impact projects.

THE OGS

03

The OGs / Situation & Tasks

SITUATION

The company’s product integrates with accounting software to process payments.

The product was growing at a rapid pace. New features were pumping out like hot cakes.

The primary focus was on the new features.

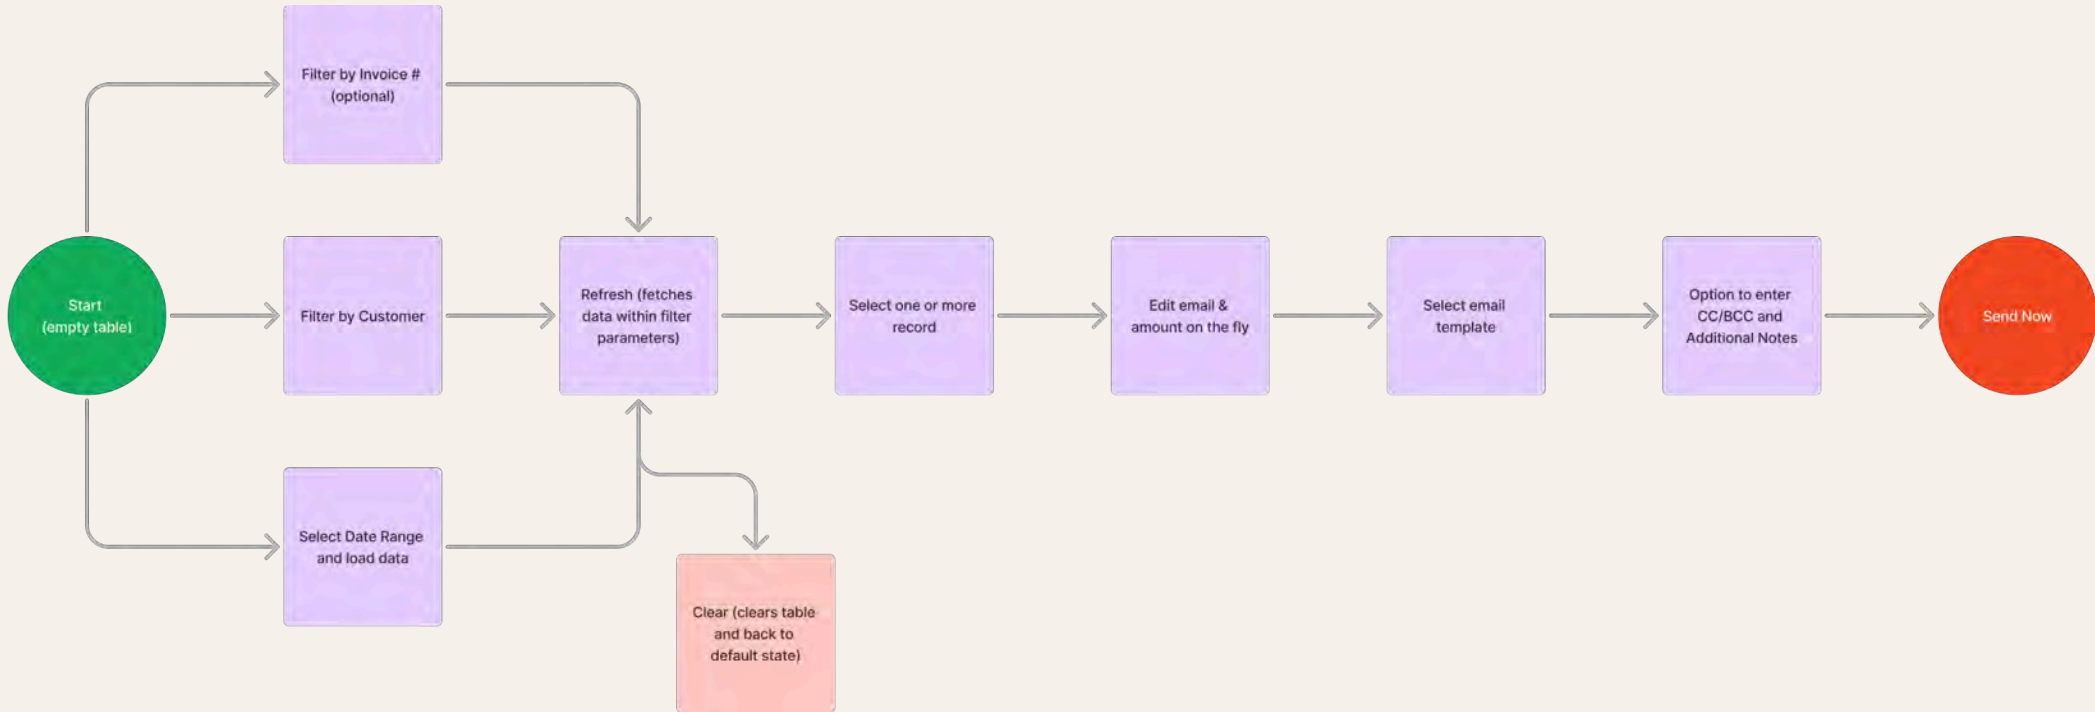

But the new features caused friction with existing features and introduced clunky workflows.

TASKS

- Add new Text2Pay feature.
- Revise workflows to reduce friction.
- Ensure double payment is not possible.

Current Workflow

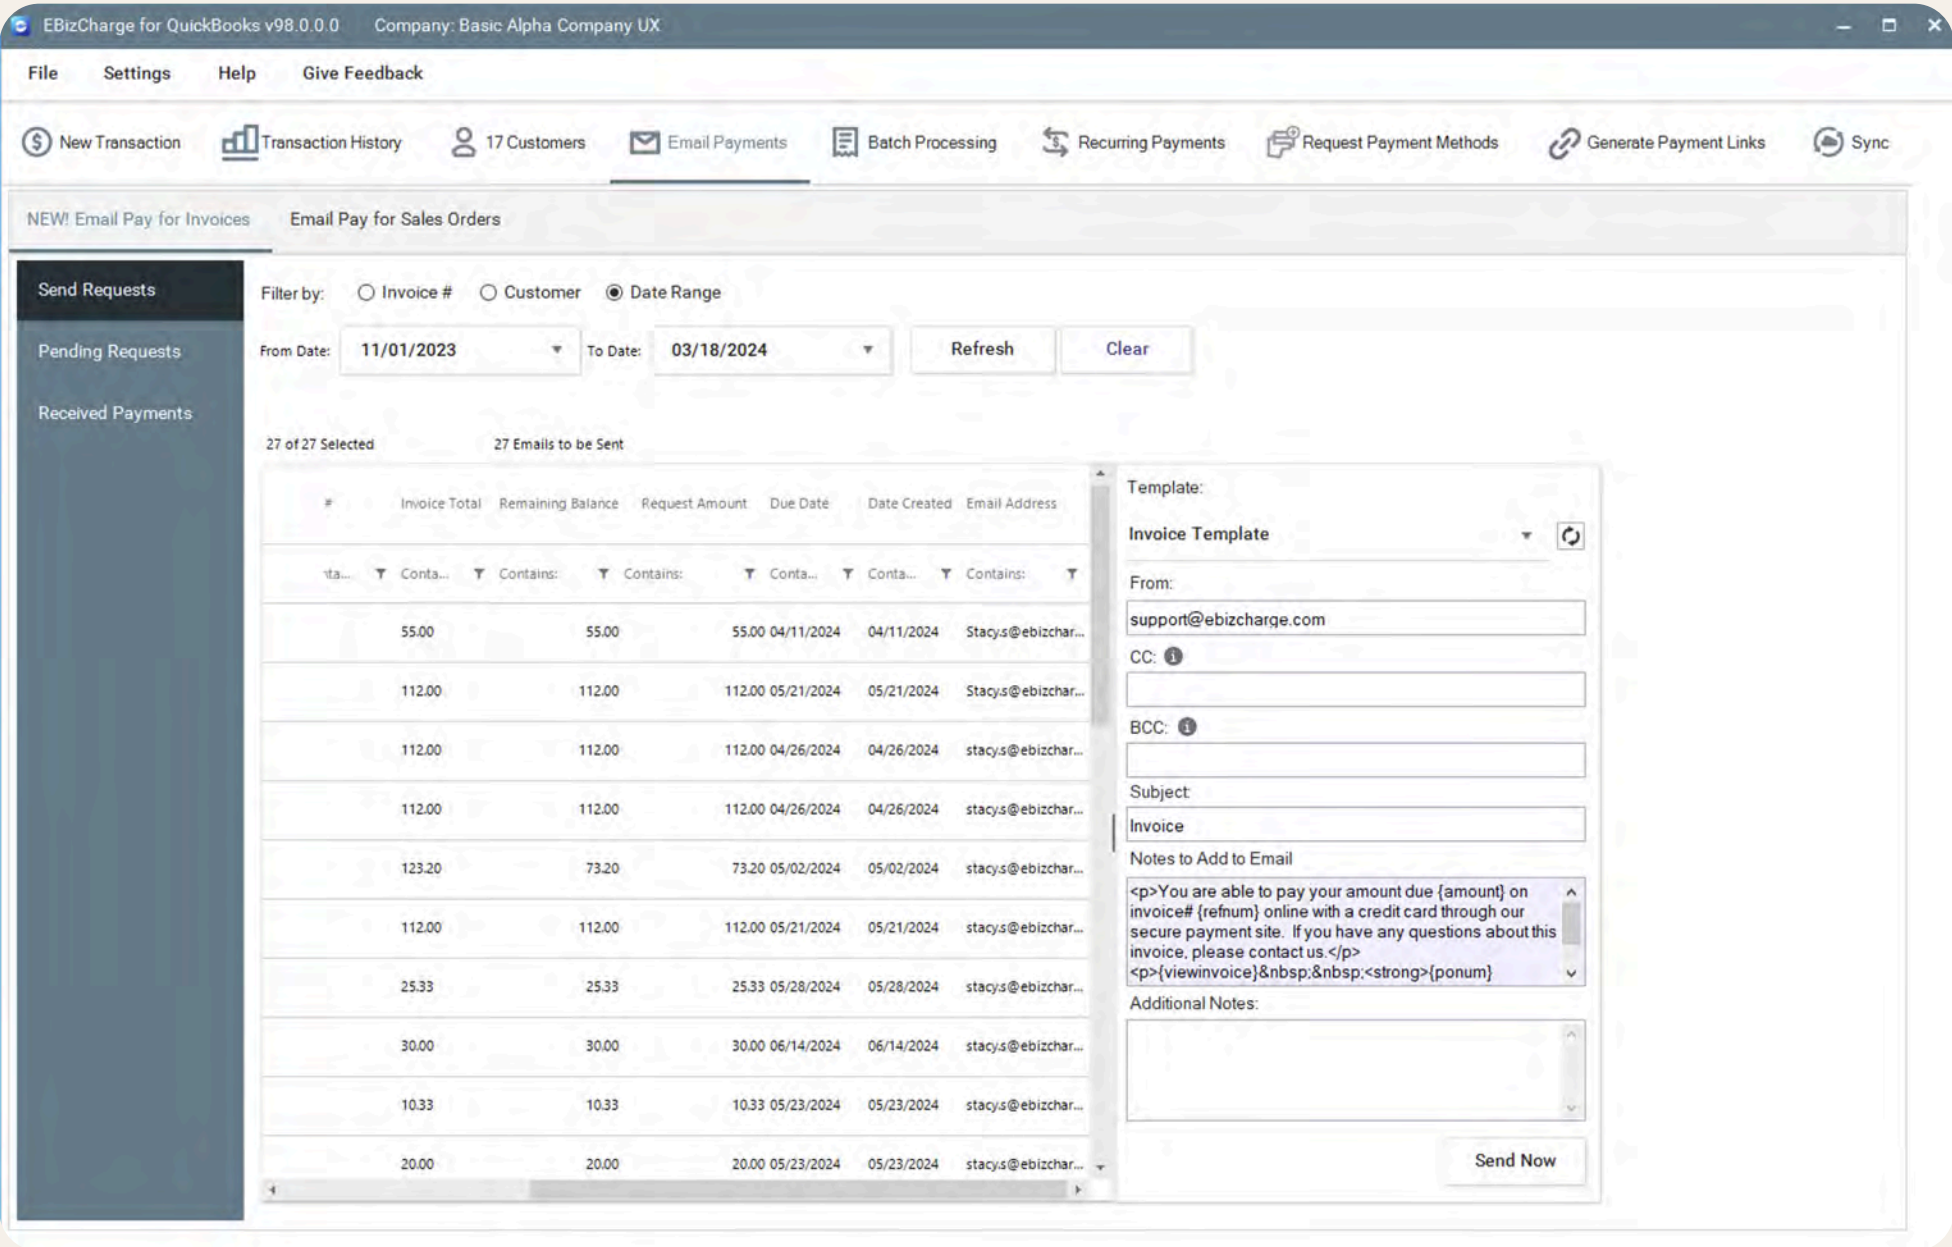

BACKGROUND

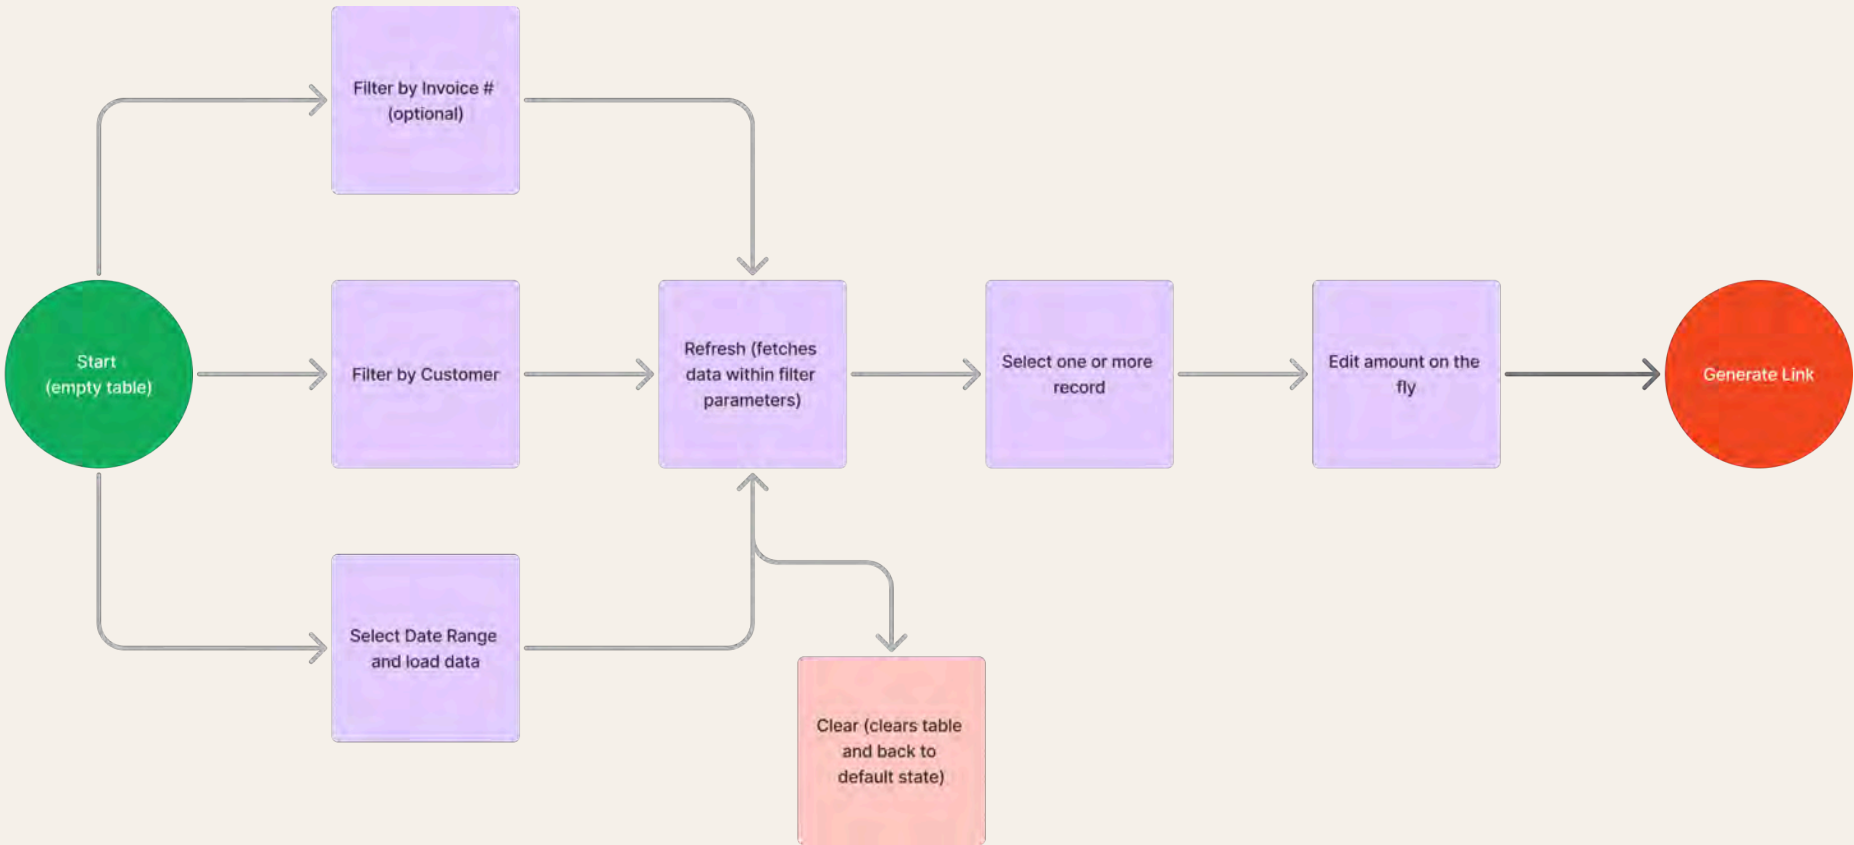

A great feature that many clients utilizes today.

EMAIL PAY

Send payment requests to the customer via email.

Current Workflow

BACKGROUND

Newer feature that was introduced after email pay. This provided more flexibility on how to deliver the payment request.

GENERATE PAYMENT LINK

Payment links are generated so the clients can send the payment request however they desired.

EBizCharge for QuickBooks VXX.XXX

Remove Link(s)Generate

Current Workflow

BACKGROUND

Latest feature that was introduced to add even greater flexibility for requesting payments.

TEXT2PAY

Similar to Email Pay, a payment request is sent to the customer, but via text message.

×

!

Removing generated links will cancel existing payment links.
A new link would need to be generated again.

Do you want to continue?

No

Yes

×

!

Processing the payment in bulk will invalidate any pending email requests or existing payment link.

Do you want to continue?

No

Yes

×

⊗

A generated link already exists.

OK

×

⊗

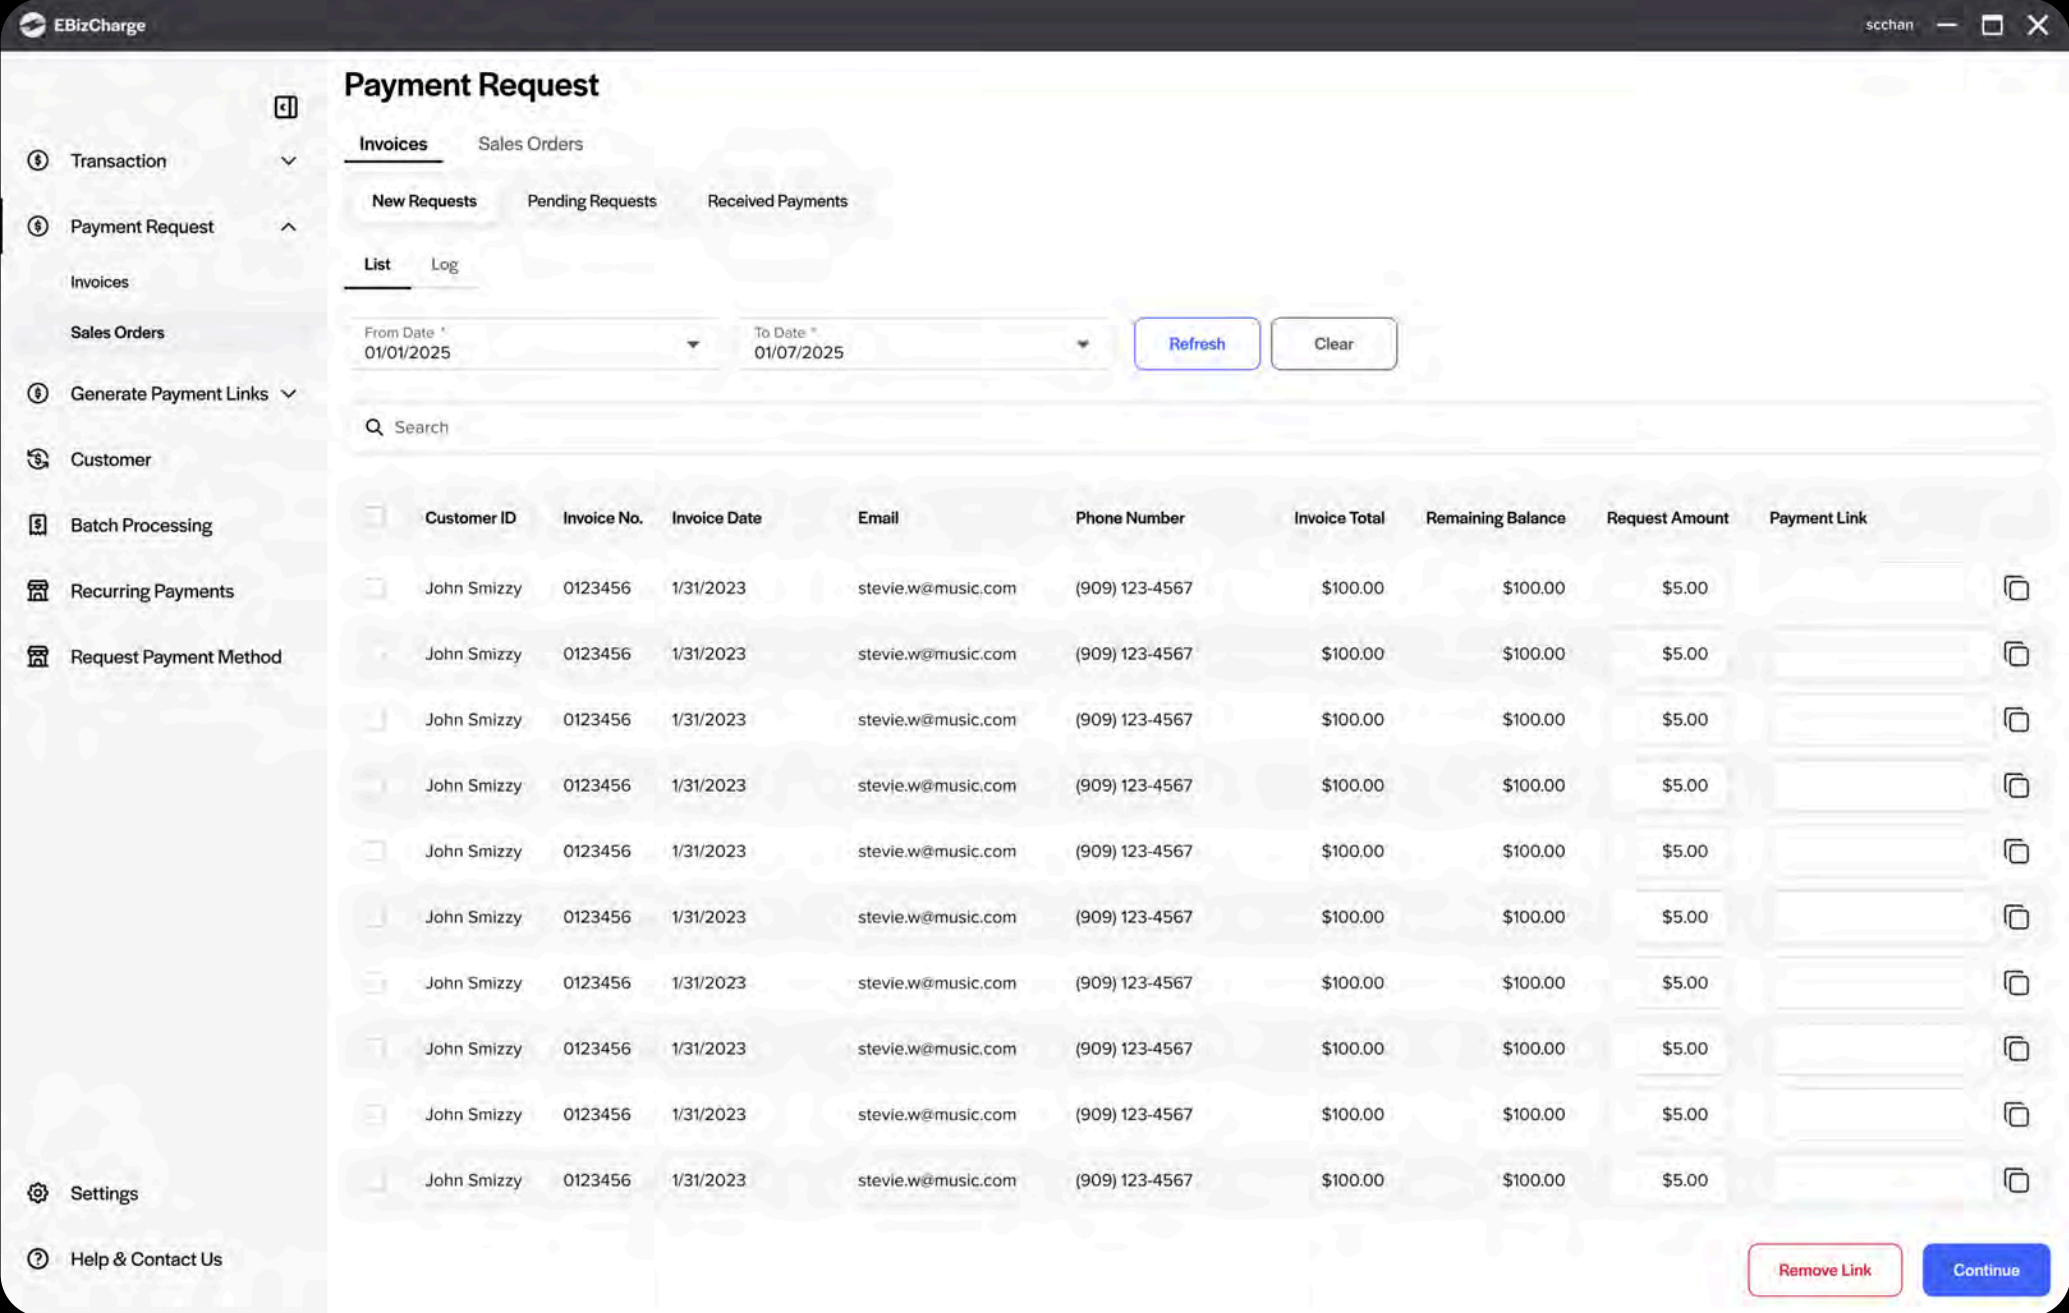

An email pay request already exists.
Delete the email request, then try again.

OK

THE FRICTION

To prevent multiple payments for the same invoice, many validations were required. If a payment request existed in one module, all other modules were not allowed to take payment or send a request. The existing request must be canceled first.

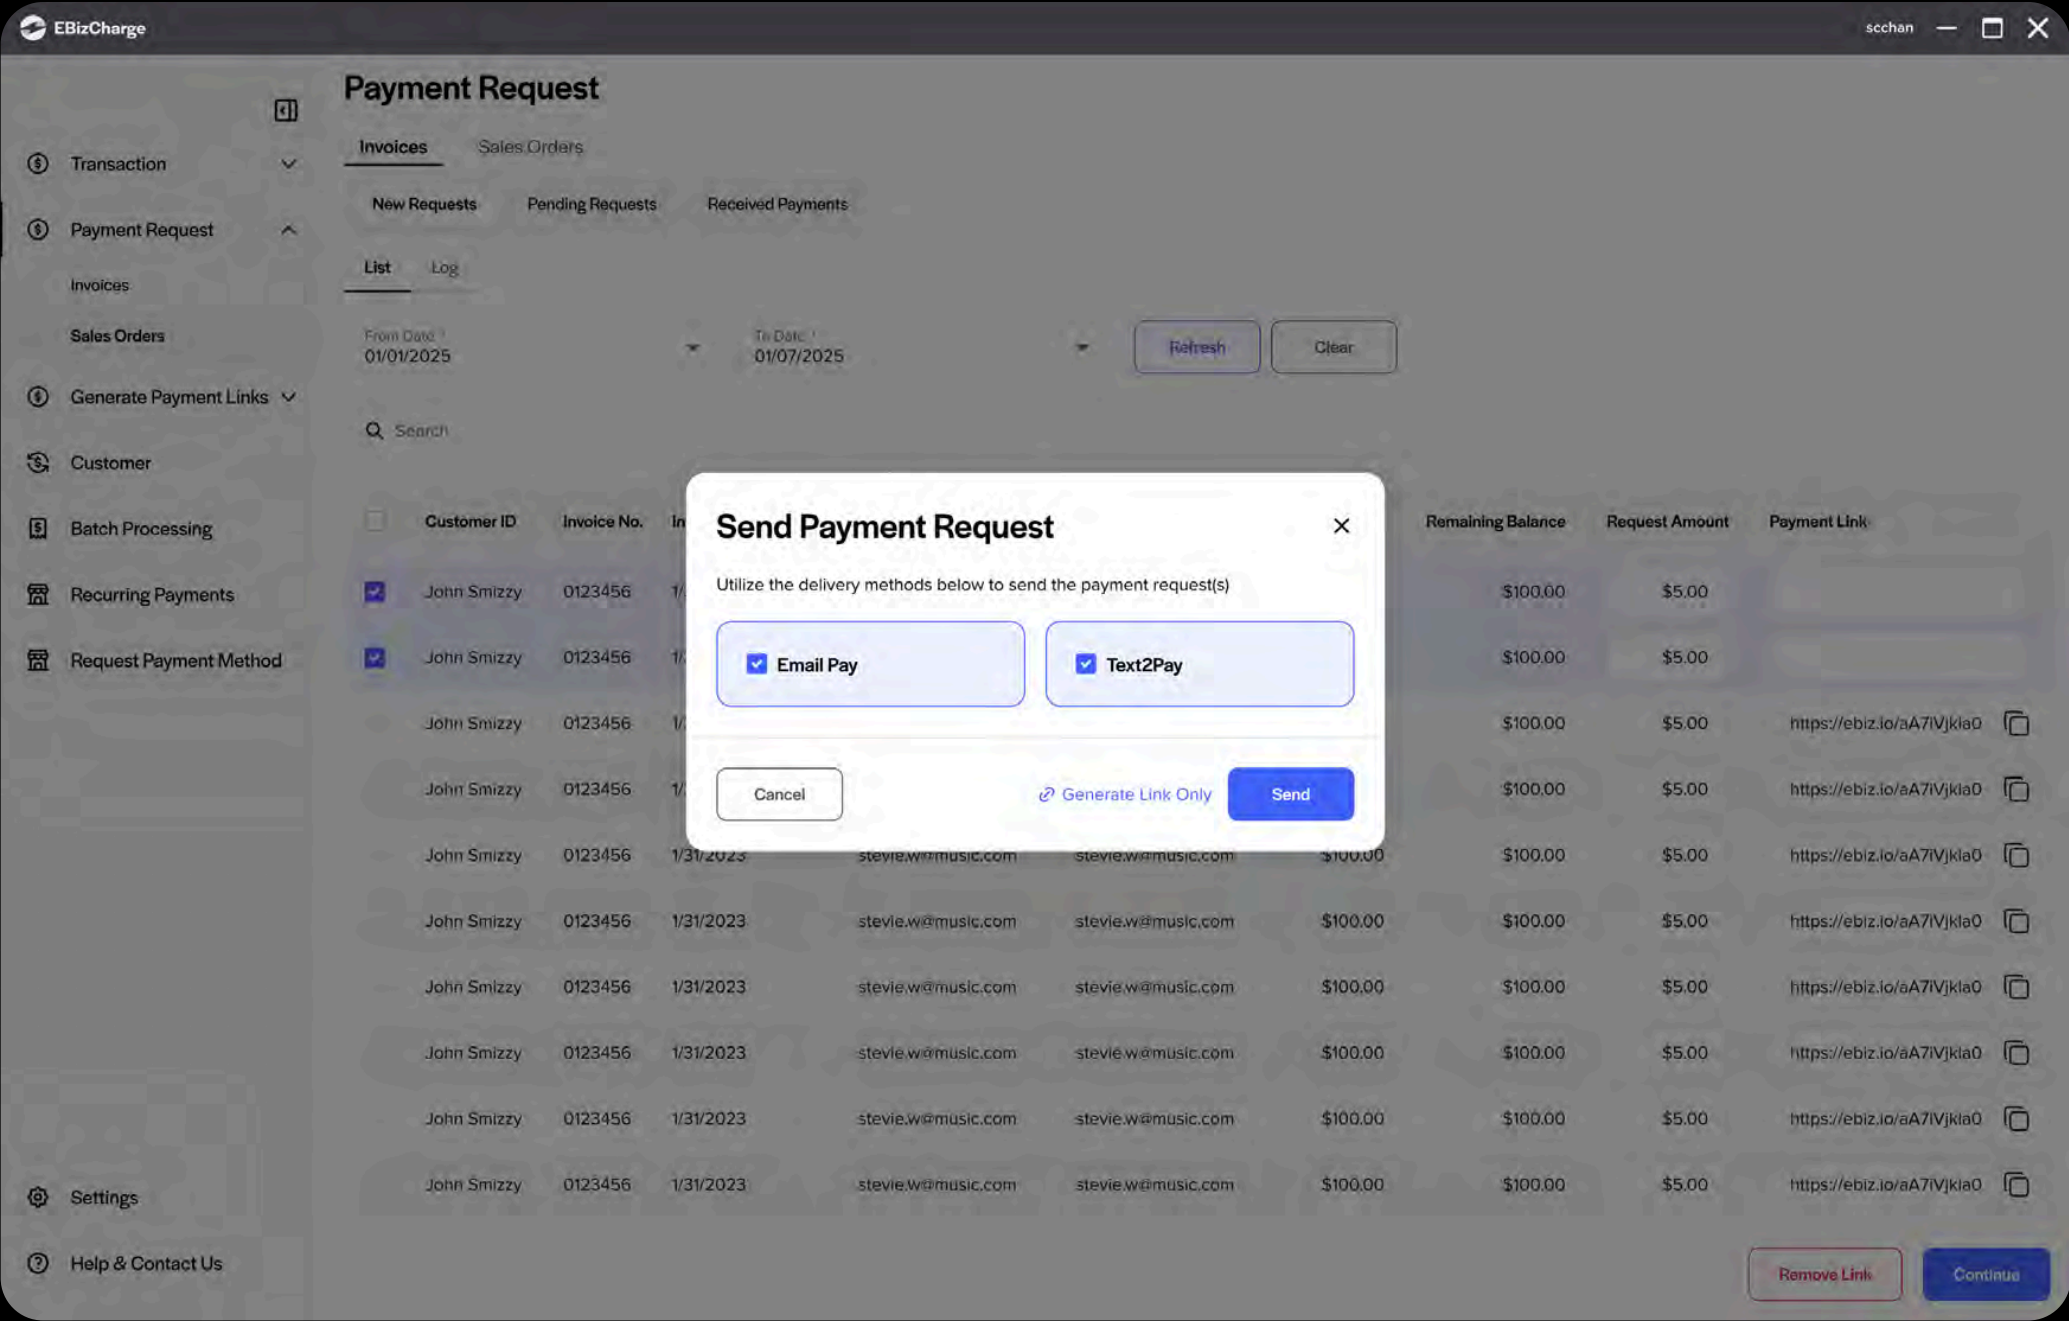

PROPOSAL

Instead of splitting this into three modules, the feature can combine into one.

All three features will need to generate a payment link regardless.

Streamline the process and allow options to send via text, and/or send via email, or generate only.

REDUCE & REUSE

The three features had near identical workflows. Friction can be reduced here by consolidating the features into one.

03

The OGs /
Journey

●

HOW DID WE GET HERE

- Identify Similarities
- Workflow Revisions
- Iterations
- Getting Buy In
- User Testing
- Design Review

●

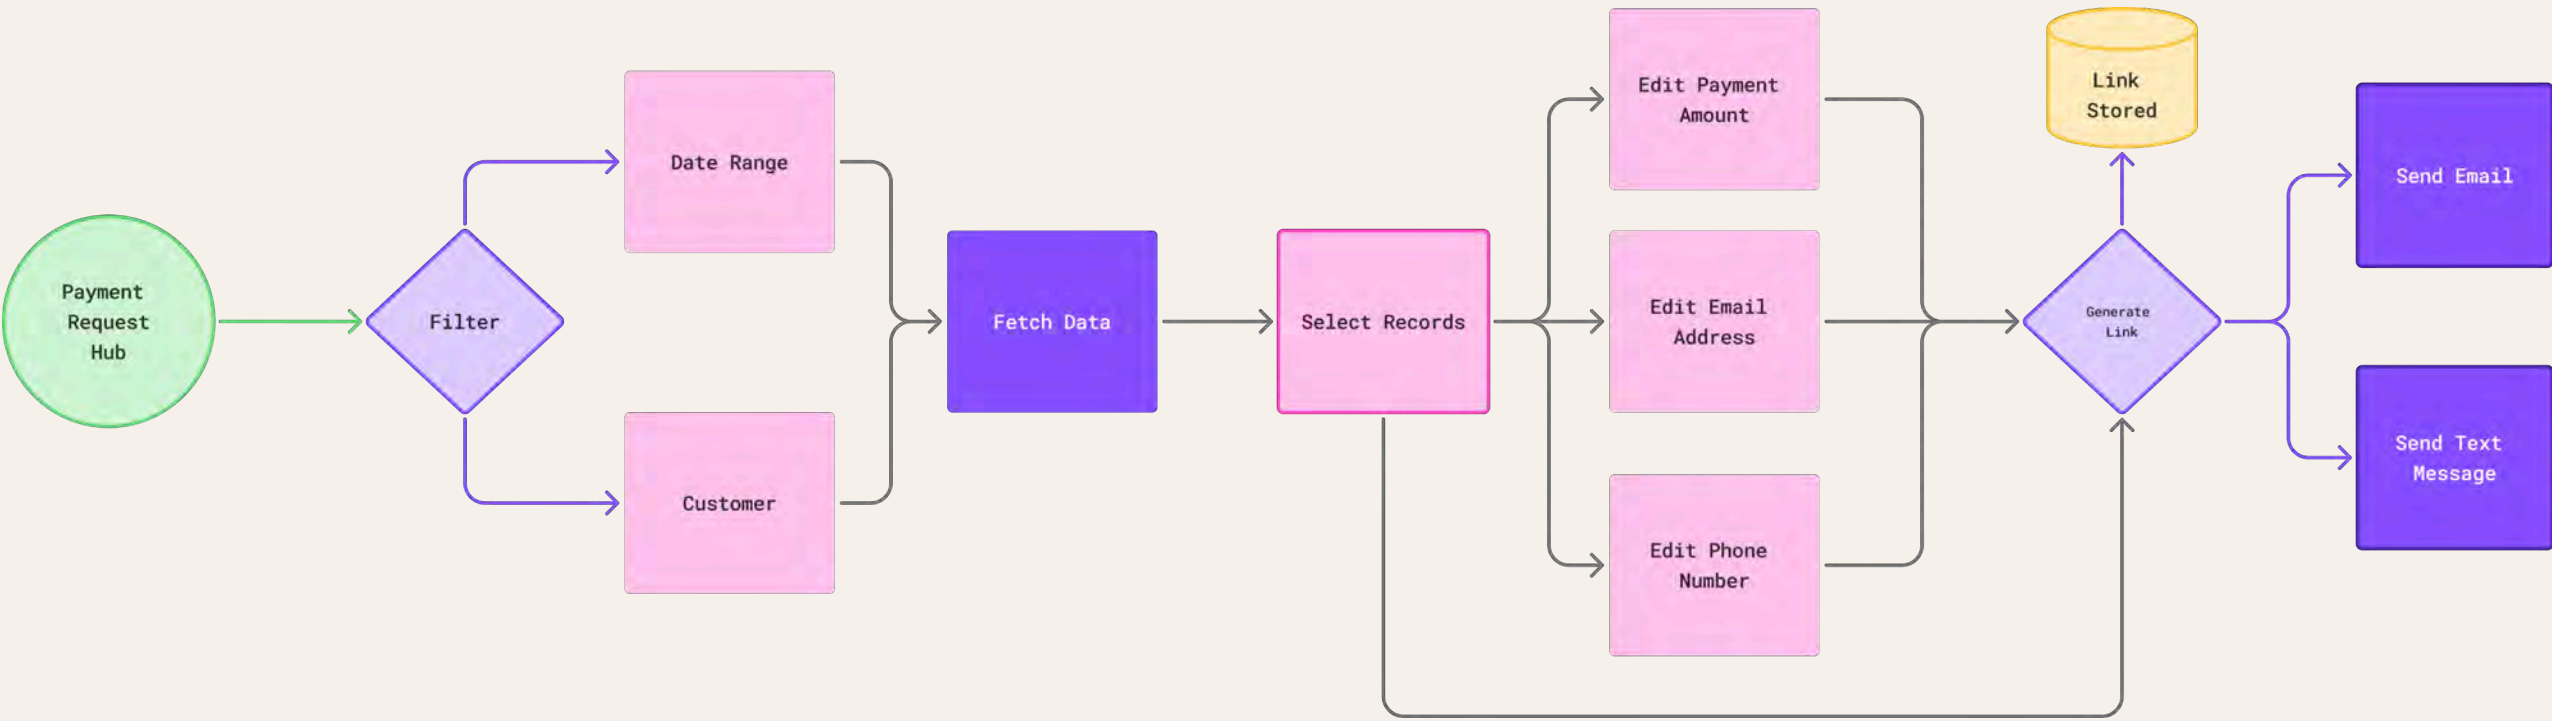

SQUAD (ORIGINAL)

- Product Owner
- Product Designer (it's me again)

●

SQUAD (AFTER BUY IN)

- VP of Product
- Design Manager
- Product Owners
- Product Designers
- Development
- Marketing
- Support
- Sales

WORKFLOWS

Identifying similarities in workflow, and where it can be streamlined.

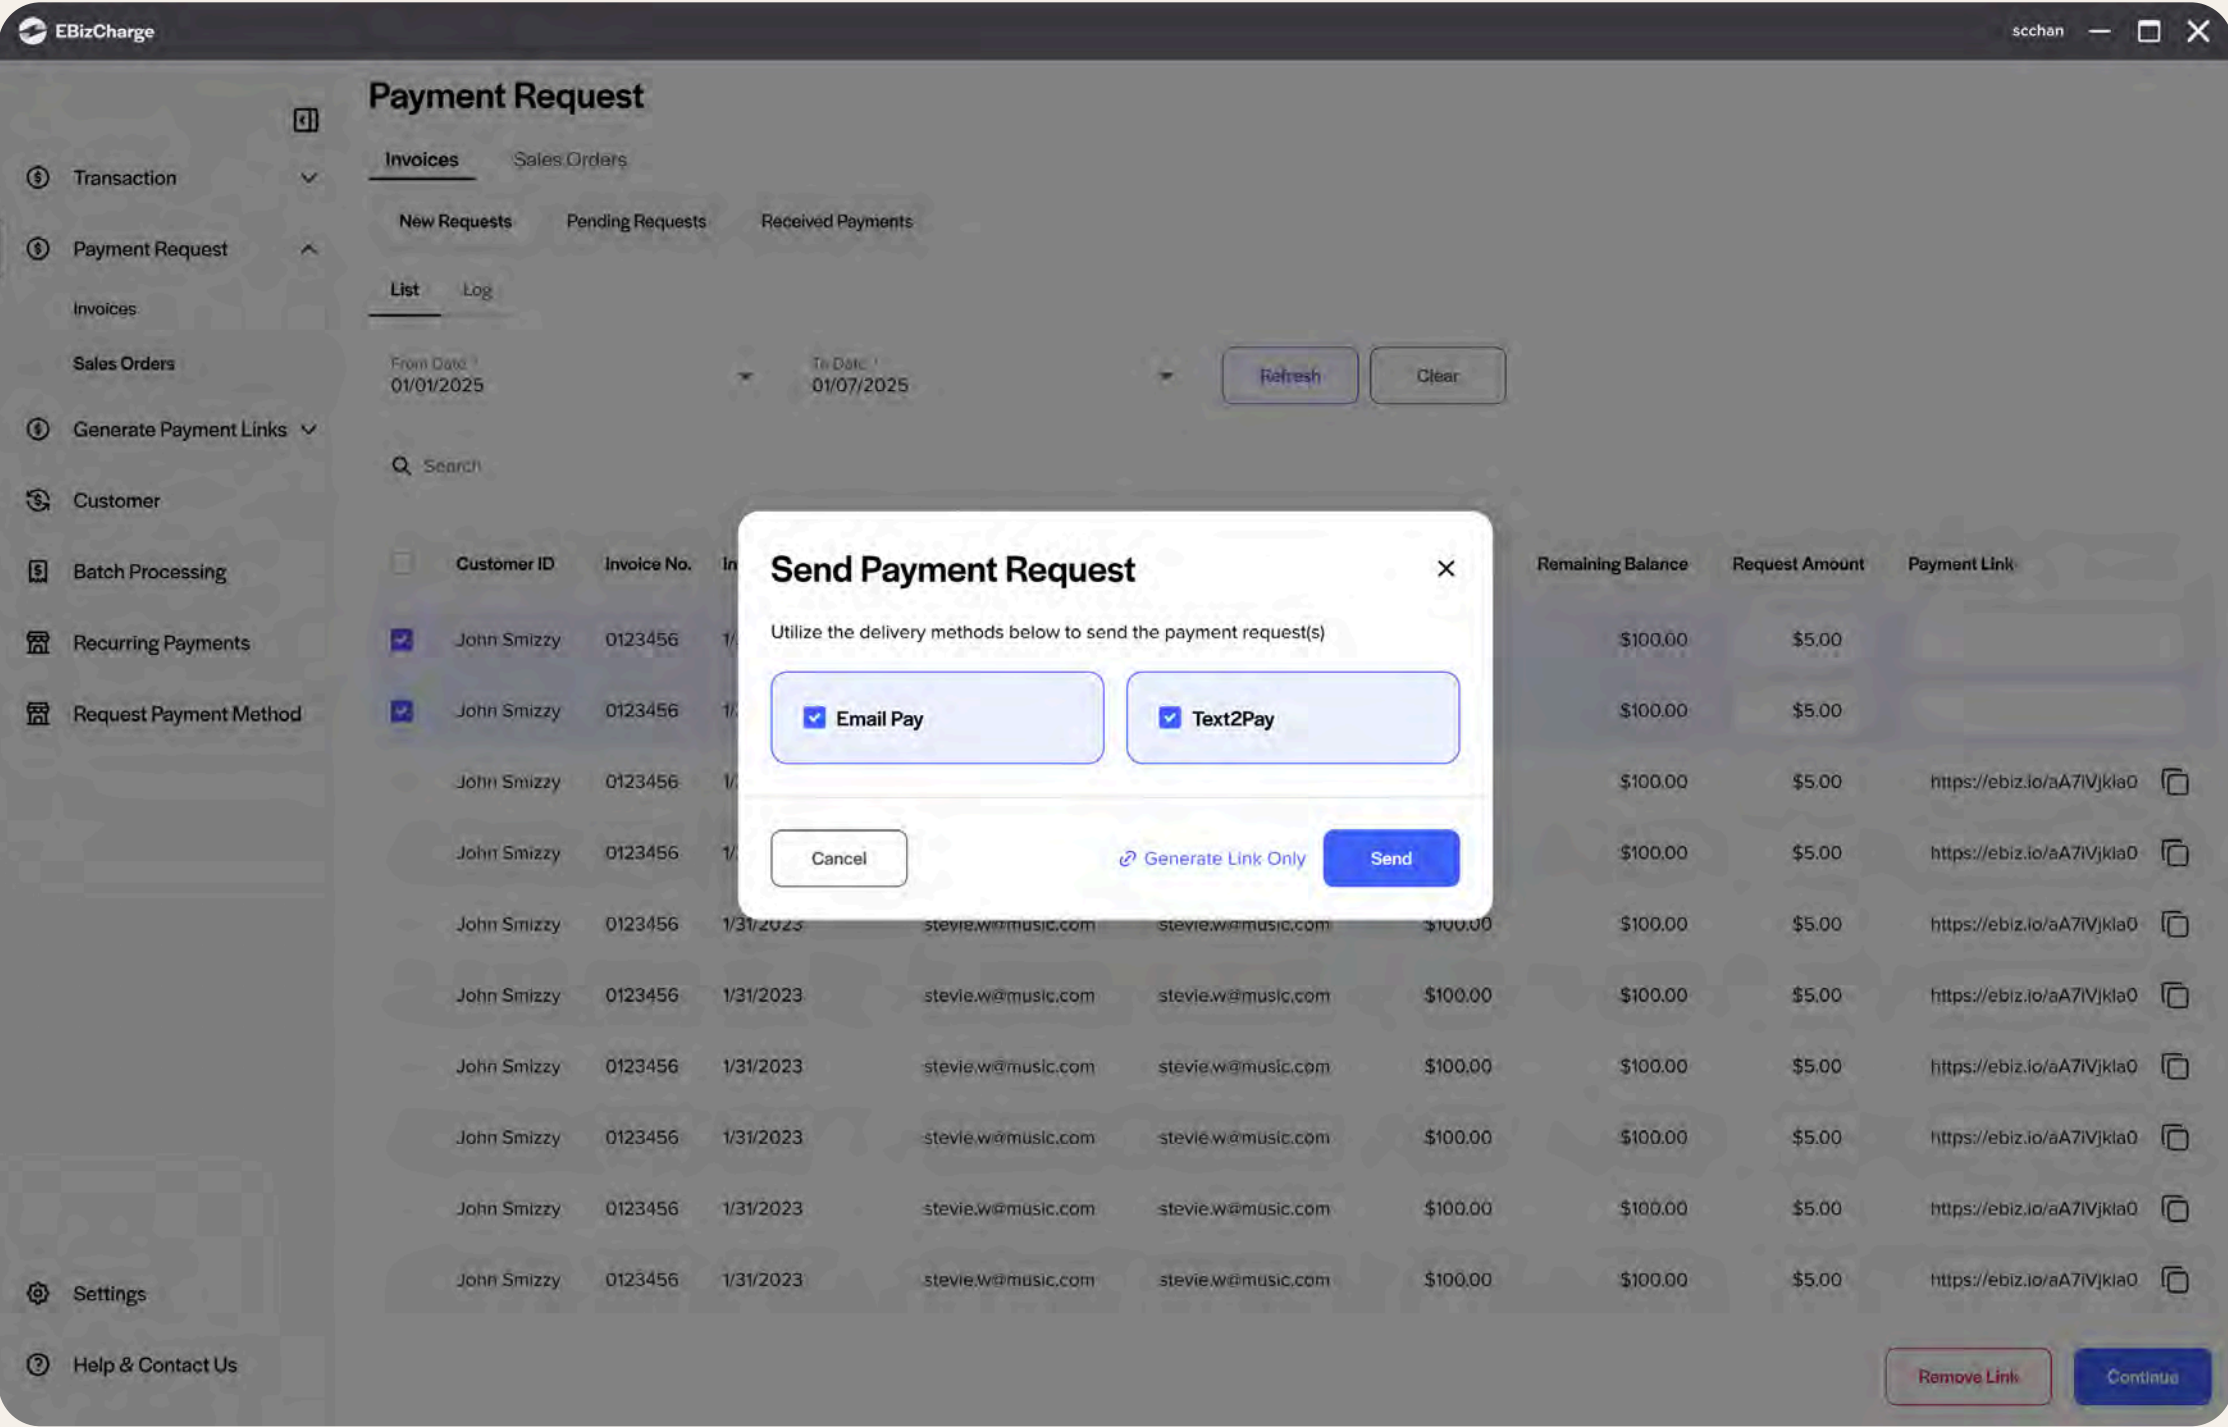

TESTING

Research. Ideate. Test. Repeat

BUY IN

Presenting the revised workflows and visuals helped the business be more receptive to the idea.

03

The OGs / Results & Summary

‘THE OGS’

- Improvements can be made to existing features
- Growing a product is great, but don’t forget about the core features. The OGs.

RESULTS

- Streamlined feature
- Reduced friction
- Reduced design work
- Reduced development work
- Reduced functional requirements
- Reduced QA overhead
- Increased user accuracy
- Decreased time for task completion
- Better product for users

SUMMARY

Change can be scary, but with a good design, a solid marketing strategy, and some faith, it’s not so bad. Change is the only constant in life. We need to be open to change in order to push our products further.

Thank you!
